

1.1 GENERAL THEORY OF TRANSMISSION LINES:

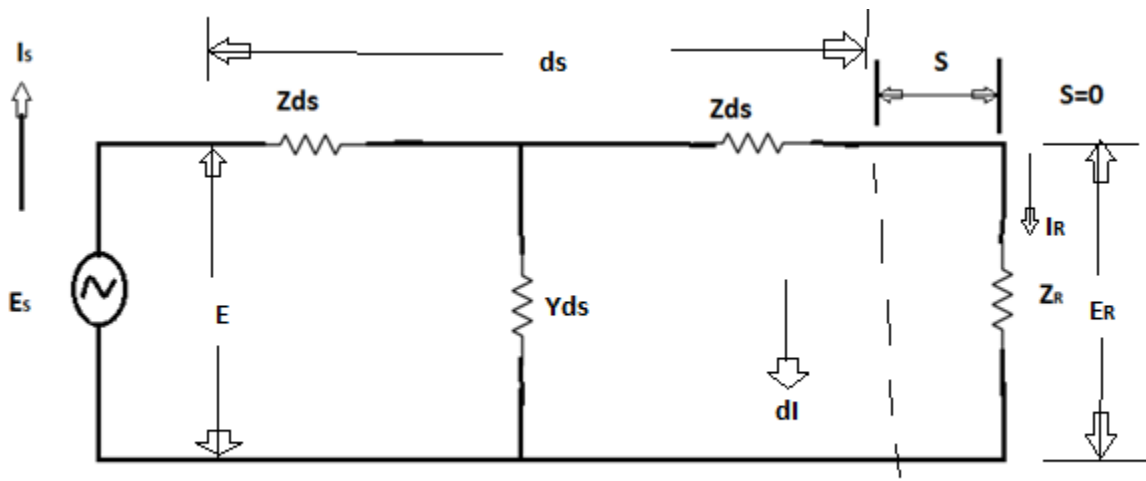

Fig: 1.1.1 A long line, with the elements of one of the infinitesimal sections shown.

From the Fig 1.1.1 consider an infinite length transmission line also an small element ds which located at a distance of s from the receiving end (Z_R). The sending end voltage and current are E_S and I_S . The receiving end voltage and current are E_R and I_R . The current and voltage at any point is E and I

The voltage in the length ds is dE .

$$dE = I Z ds$$

$$\frac{dE}{ds} = IZ \dots\dots\dots(1)$$

The current in the length ds is

$$dI = E Y ds$$

$$\frac{dI}{ds} = EY \dots\dots\dots(2)$$

Diff equ (1) and (2)

From equ(1)..... $\frac{d^2E}{ds^2} = Z \frac{dI}{ds}$

From equ(2)..... $\frac{d^2I}{ds^2} = Y \frac{dE}{ds}$

Sub the values of $\frac{dI}{ds}$ and $\frac{dE}{ds}$ in above equ

$$(m^2 - Z Y) E = 0$$

$$(m^2 - Z Y) = 0$$

$$m^2 = Z Y$$

$$m = \pm \sqrt{ZY}$$

The general solution can be written as $E = A e^{\sqrt{ZY}s} + B e^{-\sqrt{ZY}s}$ (5)

$$(m^2 - Z Y) I = 0$$

The general solution can be written as

$$I = C e^{\sqrt{ZY}s} + D e^{-\sqrt{ZY}s} \quad \text{.....(6)}$$

PHYSICAL SIGNIFICANCE OF TRANSMISSION LINE (or) INFINITE LINE (or) THE TWO STANDARD FORM FOR INPUT IMPEDANCE OF THE TRANSMISSION LINE TERMINATED BY AN IMPEDANCE Z_R .

From the Fig 1.1.2 the equation for the current and voltage may be written for the sending end current ' I_s ' of a line of length ' l ' is,

Fig: 1.1.2 A length l taken from an infinite line

The sending current equation is given by,

$$I_S = I_R \cosh \sqrt{ZY} \cdot l + \frac{E_R}{Z_0} \sinh \sqrt{ZY} \cdot l \quad [E_R = I_R Z_R]$$

$$I_S = I_R \left[\cosh \sqrt{ZY} \cdot l + \frac{Z_R}{Z_0} \sinh \sqrt{ZY} \cdot l \right] \quad \dots\dots(1)$$

The sending voltage equation is given by,

$$E_S = E_R \cosh \sqrt{ZY} \cdot l + I_R Z_0 \sinh \sqrt{ZY} \cdot l$$

WAVELENGTH AND VELOCITY OF PROPAGATION

WAVELENGTH:

Fig: 1.1.3 Propagation of current from sending and towards receiving end

The distance with which the wave changes its phase by 2π radians is known as wavelength.

In Fig 1.1.3 the distance from the sending end to point 8 is thus one wavelength.

The distance the wave travels along the line where the phase angle is changing to 2π radians is known as wavelength.

It is denoted by λ ,

$$\lambda = \frac{2\pi}{\beta} \quad \dots\dots(1)$$

and also we know,

$$\lambda = \frac{v}{f}$$

$$v = \lambda \cdot f$$

v- velocity

f- frequency

$$v = \frac{2\pi}{\beta} \cdot f$$

$$v = \frac{\omega}{\beta} \quad \dots\dots\dots(2)$$

$$\left[\lambda = \frac{2\pi}{\beta} \right]$$

$$\left[\omega = 2\pi f \right]$$

VELOCITY OF PROPAGATION:

The velocity of propagation along the line depends on the change in the phase along the line. Therefore, this velocity is called phase velocity or wave velocity.

$$\gamma = \ln \left(\frac{V_1}{V_2} \right) = \ln \left(\frac{I_1}{I_2} \right)$$

In general,

$$\gamma = \alpha + j\beta$$

$$\gamma = \sqrt{ZY} \quad \dots\dots\dots(1)$$

$$RG\beta^2 - \omega^2 LC \beta^2 + \beta^4 = \frac{\omega^2}{4} (RC + LG)^2$$

$$RG\beta^2 - \omega^2 LC \beta^2 + \beta^4 - \frac{\omega^2}{4} (RC + LG)^2 = 0$$

$$\beta^4 + \beta^2(RG - \omega^2 LC) - \frac{\omega^2}{4} (RC + LG)^2 = 0 \quad \dots\dots\dots(7)$$

$$\beta^2 = \frac{(\omega^2 LC - RG) + \sqrt{(RG - \omega^2 LC)^2 + (\omega^2 (RC + LG)^2)}}{2}$$

$$\beta = \sqrt{\frac{(\omega^2 LC - RG) + \sqrt{(RG - \omega^2 LC)^2 + (\omega^2 (RC + LG)^2)}}{2}} \quad \dots\dots(8)$$

Sub β^2 value in equ (5),

$$\alpha^2 = RG - \omega^2 LC + \left(\frac{(\omega^2 LC - RG) + \sqrt{(RG - \omega^2 LC)^2 + (\omega^2 (RC + LG)^2)}}{2} \right)$$

$$\alpha = \sqrt{\frac{(RG - \omega^2 LC) + \sqrt{(RG - \omega^2 LC)^2 + (\omega^2 (RC + LG)^2)}}{2}} \quad \dots\dots(9)$$

In a perfectly matched line $R=0$ and $G=0$,

Sub the above condition in β .

From equ (8),

$$\beta = \sqrt{\frac{(\omega^2 LC) + \sqrt{(-\omega^2 LC)^2}}{2}}$$

The velocity of propagation of a ideal line is,

$$v = \frac{\omega}{\beta}$$

$$v = \frac{\omega}{\omega \sqrt{LC}}$$

$$v = \frac{1}{\sqrt{LC}}$$

The velocity of propagation is constant for a given L and C.
