ROHINI COLLEGE OF ENGINEERING AND TECHNOLOGY

(AUTONOMOUS)

(Anjugramam-Kanyakumari Main Road, Palkulam,Variyoor P.O.-629 401, K.K.Dist.)

Approved by AICTE, New Delhi and Affiliated to Anna University, Chennai

Accredited with A+ Grade by NAAC

Department of Mechanical Engineering

(M.E Thermal Engineering)

Curriculum & Syllabus

(*2024-2025 Admitted Students Onwards*)

Vision Statement of RCET

To be an academic institute of continuous excellence towards education and research in rural regime and provide service to nation in terms of nurturing potentially higher social, ethical and engineering companion graduands.

Mission Statement of RCET

To foster and promote technically competent graduands by imparting the state of art engineering education in rural regime.

To enunciate research assisted scientific learning by dissemination of knowledge towards science, agriculture, industry and national security.

Vision of the Department

To inculcate competence in the field of mechanical engineering for the students by providing quality education and learning opportunities to become ethically strong engineers for the development of society.

Mission of the Department

To provide fundamentals and technical skills in Mechanical Engineering through effective teaching-learning methodologies.

To provide an ambience for research through collaborations with industry and academia.

To inculcate the students' leadership quality through employability skills with ethical values.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

PEO1	Graduates will apply the knowledge of Mechanical Engineering concepts and innovative methods to solve real-world engineering problems.
PEO2	Graduates will have the required qualities for a successful carrier in Mechanical Engineering and related fields.
PEO3	Graduates will exhibit professional skills with ethical values and teamwork.

PROGRAMME OUTCOMES (POs)

On successful completion of the programme,

PO1	An ability to independently carry out research /investigation and development work to solve practical problems.
PO2	An ability to write and present a substantial technical report/document.
PO3	Students should be able to demonstrate a degree of mastery over the area as per the specialization of the Thermal Engineering. The mastery should be at a level higher than the requirements in the appropriate bachelor program.

Course Code:	24TE101	Course Title:	Advanced Numerical Methods
Credits:	4	L – T – P	4-0-0

Course objectives:

To impart knowledge on the

- To study various numerical techniques to solve linear and non-linear algebraic and transcendental equations.
- To compare ordinary differential equations by finite difference and collocation methods.
- To establish finite difference methods to solve Parabolic and hyperbolic equations.
- To establish finite difference method to solve elliptic partial differential equations.
- To provide basic knowledge in finite elements method in solving partial differential equations.

Teaching-Learning Process:

Suggested strategies that teachers may use to effectively achieve the course outcomes:

1. Chalk and Talk
2. Lab experiment videos
3. Blended Mode of Learning
4. Project based Learning
5. Experiential Learning
6. NPTEL and Other Videos
7. Smart Class Room
8. Flipped Class

UNIT I – Algebraic Equations	[12 hours]

Systems of linear equations : Gauss elimination method – Pivoting techniques – Thomas algorithm for tri diagonal system – Jacobi, Gauss Seidel, SOR iteration methods – Conditions for convergence - Systems of nonlinear equations : Fixed point iterations, Newton's method, Eigenvalue problems : Power method and Given’s method.

UNIT II – Ordinary Differential Equations	[12 hours]

Runge - Kutta methods for system of IVPs – Numerical stability of Runge - Kutta method – Adams - Bashforth multistep method, Shooting method, BVP: Finite difference method, Collocation method and orthogonal collocation method.

UNIT III – Finite Difference Method for Time Dependent Partial Differential Equations	**[12 hours]**
Parabolic equations: Explicit and implicit finite difference methods – Weighted average approximation - Dirichlet's and Neumann conditions – Two dimensional parabolic equations – ADI method: First order hyperbolic equations – Method of numerical integration along characteristics – Wave equation: Explicit scheme – Stability.	
UNIT IV – Finite Difference Methods for Elliptic Equations	**[12 hours]**
Laplace and Poisson's equations in a rectangular region: Five point finite difference schemes, Leibmann's iterative methods, Dirichlet's and Neumann conditions – Laplace equation in polar coordinates: Finite difference schemes – Approximation of derivatives near a curved boundary while using a square mesh.	
UNIT V – Finite Element Method	**[12 hours]**
Basics of finite element method: Weak formulation, Weighted residual method – Shape functions for linear and triangular element – Finite element method for two point boundary value problems, Laplace and Poisson equations.	

Course outcomes:

On completion of the course, the student will have the ability to:

CO1	Solve an algebraic or transcendental equation, linear system of equations and differential equations using an appropriate numerical method.	**K3**
CO2	Solving the initial boundary value problems and boundary value problems using finite difference and finite element methods.	**K3**
CO3	Solving parabolic and hyperbolic partial differential equations by finite difference methods.	**K3**
CO4	Compute solution of elliptic partial differential equations by finite difference methods.	**K3**
CO5	Selection of appropriate numerical methods to solve various types of problems in engineering and science in consideration with the minimum number of mathematical operations involved, accuracy requirements and available computational resources.	**K3**

COs and POs Mapping:

COs	POs		
	1	**2**	**3**
CO1	3	2	1
CO2	3	3	2
CO3	3	2	1
CO4	3	3	2
CO5	3	2	1

Level 3- Highly Mapped, Level 2- Moderately Mapped, Level 1- Low Mapped, Level 0- Not Mapped

Scheme of Evaluation:

Component	Type of assessment	Max Marks	Reduced Marks	Total	Final marks
Continuous Internal Examination (CIE)	CIE – I	100	50	100	40

4. Dirichlet's and Neumann conditions: https://onlinecourses.nptel.ac.in/noc20_ee04/preview

Suggested Skill Activities:

1. List some common methods for tridiagonal systems.
2. Problem solving in computational fluid dynamics for one dimension.
3. Problem solving in computational fluid dynamics for two dimension.
4. Solving heat transfer problems using finite element method.

Course Code:	24TE102	Course Title:	Advanced Heat Transfer
Credits:	4	L – T – P	4-0-0

Course objectives:

To impart knowledge on the

- To impart knowledge on conduction heat transfer associated with radiation.
- To impart knowledge on the turbulent forced convective heat transfer.
- To impart knowledge on the significance of Phase Change Heat Transfer and Mass
- Transfer.
- To teach the heat exchanger design aspects including compact heat exchangers.
- To impart knowledge on Mass transfer as an engineering phenomenon.

Teaching-Learning Process:

Suggested strategies that teachers may use to effectively achieve the course outcomes:

1. Chalk and Talk
2. Lab experiment videos
3. Blended Mode of Learning
4. Project based Learning
5. Experiential Learning
6. NPTEL and Other Videos
7. Smart Class Room
8. Flipped Class

UNIT I – Conduction and Radiation Heat Transfer	[12 hours]

One dimensional energy equations and boundary condition - three-dimensional heat conduction equations - extended surface heat transfer- various pin profiles- pin optimization - transient conduction-- conduction with moving boundaries - radiation in gases and vapour. Gas radiation and radiation heat transfer in enclosures containing absorbing and emitting media – interaction of radiation with conduction and convection

UNIT II – Turbulent Forced Convective Heat Transfer	[12 hours]

Momentum and energy equations - turbulent boundary layer heat transfer - mixing length concept - turbulence model – k Є model - analogy between heat and momentum transfer – Reynolds, Colburn, Prandtl turbulent flow in a tube - high speed flows.

UNIT III – Phase Change Heat Transfer and Heat Exchanger	[12 hours]
Condensation on bank of tubes - boiling – pool and flow boiling - heat Transfer Enhancement Techniques.	
UNIT IV – Heat Exchangers	**[12 hours]**
Heat Exchanger – Є- NTU approach and design procedure – compact heat exchangers – Plate heat exchangers– Mini and Micro Channel heat exchangers, Heat transfer correlations for specific cases.	
UNIT V – Mass Transfer	**[12 hours]**
Mass transfer - vaporization of droplets - combined heat and mass transfers applications – Cooling Towers, Evaporative condensers, solar pond, Cooling and dehumidification systems – porous media heat transfer	

Course outcomes:

On completion of the course, the student will have the ability to:

CO1	Apply the problems on heat transfer associated with conduction and convection and radiation through vapours and gases.	**K3**
CO2	Solve the problems on turbulent heat transfer and also solve high speed flow problems.	**K3**
CO3	Apply the problems on phase change heat transfer.	**K3**
CO4	Estimate the performance of compact heat exchangers and also understand the use of correlations to predict heat transfer from specific devices	**K2**
CO5	Illustrate and predict the mass transfer associated with heat transfer in engineering systems	**K3**

COs and POs Mapping:

COs	POs		
	1	**2**	**3**
CO1	2	1	3
CO2	2	2	3
CO3	2	1	3
CO4	2	2	3
CO5	2	2	2

Level 3- Highly Mapped, Level 2- Moderately Mapped, Level 1- Low Mapped, Level 0- Not Mapped

Scheme of Evaluation:

Component	Type of assessment	Max Marks	Reduced Marks	Total	Final marks
Continuous Internal Examination (CIE)	CIE – I	100	50	100	40
	CIE – II	100

Suggested Skill Activities:

1. Analyzing Multi-dimensional Transient heat conduction problems using a software.
2. Analyzing One-dimensional Transient heat conduction problems using a software.
3. Analysis of fin heat conduction problems.
4. Compare between shell and tube heat exchanger and parallel flow heat exchanger.

Course Code:	24TE103	Course Title:	Advanced Thermodynamics
Credits:	4	L – T – P	3-1-0

Course objectives:

To impart knowledge on the

- To achieve an understanding of basic principle and scope of thermodynamics.
- To predict the availability and irreversibility associated with the thermodynamic processes.
- To analyse the properties of ideal and real gas mixtures and to understand the basic concepts of thermal systems

Teaching-Learning Process:

Suggested strategies that teachers may use to effectively achieve the course outcomes:

1. Chalk and Talk
2. Lab experiment videos
3. Blended Mode of Learning
4. Project based Learning
5. Experiential Learning
6. NPTEL and Other Videos
7. Smart Class Room
8. Flipped Class

UNIT I – Thermodynamic Property Relations	[12 hours]

Thermodynamic Potentials, Maxwell relations, Generalised relations for changes in Entropy, Internal Energy and Enthalpy, Generalised Relations for Cp and Cv, Clausius Clapeyron Equation, Joule Thomson Coefficient, Bridgeman Tables for Thermodynamic Relations.

UNIT II – Real Gas Behavior and Multi-Component Systems	[12 hours]

Equations of State (mention three equations), Fugacity, Compressibility, Principle of Corresponding States, and use of generalised charts for enthalpy and entropy departure, fugacity coefficient, Lee-Kesler generalised three parameter tables. Fundamental property relations for systems of variable composition, partial molar properties, Real gas mixtures, Ideal solution of real gases and liquids, Equilibrium in multi-phase systems, Gibb's phase rule for non-reactive components.

UNIT III – Availability Analysis	[12 hours]
Introduction, Reversible work, Availability, Irreversibility and Second - Law Efficiency for a closed System and Steady-State Control Volume. Availability Analysis of Simple Cycles. Chemical availability of closed and control volume. Fuel Chemical availability, Evaluation of the availability of hydrocarbon fuels.	
UNIT IV – Fuel - Air Cycles and Their Analysis	**[12 hours]**
Ideal Models of Engine Processes, Fuel–Air Cycle Analysis – SI Engine Cycle Simulation, CI Engine Cycle Simulation, Results of Cycle Calculations, Availability Analysis of Engine Processes – Availability Relationships – Entropy changes in Ideal Cycles – Availability Analysis of Ideal Cycles.	
UNIT V – Thermo Chemistry	**[12 hours]**
Ideal gas laws and properties of Mixtures, Combustion Stoichiometry, Application of First Law of Thermodynamics – Heat of Reaction – Enthalpy of Formation – Adiabatic flame temperature. Second law of Thermodynamics applied to combustion – entropy, maximum work and efficiency Chemical equilibrium: - Equilibrium constant evaluation Kp & Kf, Equilibrium composition evaluation of ideal gas and real gas mixtures.	

Course outcomes:

On completion of the course, the student will have the ability to:

CO1	Apply the law of thermodynamics to thermal systems.	**K3**
CO2	Solve the actual thermodynamic cycles	**K3**
CO3	Develop a multi component thermodynamic system	**K3**
CO4	Apply the thermodynamics concepts in automotive systems	**K3**
CO5	Illustrate and analyse the combustion of different fuels	**K3**

COs and POs Mapping:

COs	POs		
	1	**2**	**3**
CO1	2	-	3
CO2	2	1	3
CO3	2	-	3
CO4	2	1	3
CO5	2	1	3

Level 3- Highly Mapped, Level 2- Moderately Mapped, Level 1- Low Mapped, Level 0- Not Mapped

Scheme of Evaluation:

Component	Type of assessment	Max Marks	Reduced Marks	Total	Final marks

5. Thermo Chemistry: https://onlinecourses.nptel.ac.in/noc22_me113/preview

Suggested Skill Activities:

1. Describe the correlation between various properties of a thermodynamic system, such as temperature, pressure, volume, internal energy, enthalpy and entropy.
2. Application of modified ideal gas equation to real gas.
3. Energy based optimization for various thermodynamical systems.
4. Experimental investigation of engines performance for modified fueled engines.

Course Code:	24TE104	Course Title:	Advanced Fluid Mechanics
Credits:	3	L – T – P	3-0-0

Course objectives:

To impart knowledge on the

- To understand the laws of fluid flow for ideal and viscous fluids.
- To represent the real solid shapes by suitable flow patterns and to analyze the same for aerodynamics performances.
- To understand the changes in properties in compressible flow and shock expansion.

Teaching-Learning Process:

Suggested strategies that teachers may use to effectively achieve the course outcomes:

1. Chalk and Talk
2. Lab experiment videos
3. Blended Mode of Learning
4. Project based Learning
5. Experiential Learning
6. NPTEL and Other Videos
7. Smart Class Room
8. Flipped Class

UNIT I – Basic Equations of Flow	[9 hours]

Three dimensional continuity equation - differential and integral forms – equations of motion momentum and energy - Reynolds transport theorem – Navier – Stokes equation – Engineering Applications

UNIT II – Potential Flow Theory	[9 hours]

Rotational and irrorational flows - circulation – vorticity - stream and potential functions for standard flows and combined flows – representation of solid bodies by flow patterns. Pressure distribution over stationery and rotating cylinders in a uniform flow - Magnus effect - Kutta –Zhukov sky theorem. Complex potential functions. Conformal transformation to analyze the flow over flat plate, cylinder, oval body and airfoils. Thin airfoil theory – generalized airfoil theory for cambered and flapped airfoils.

UNIT III – Viscous Flow Theory	[9 hours]

Laminar and turbulent flow - laminar flow between parallel plates - Poiseuille's equation for flow through circular pipes. Turbulent flow - Darcy Weisbach equation for flow through

circular pipe - friction factor - smooth and rough pipes - Moody diagram – losses during flow through pipes. Pipes in series and parallel – transmission of power through pipes.	
UNIT IV – Boundary Layer Concept	**[9 hours]**
Boundary Layer - displacement and momentum thickness - laminar and turbulent boundary layers in flat plates - velocity distribution in turbulent flows in smooth and rough boundaries - laminar sub layer.	
UNIT V – Compressible Fluid Flow	**[9 hours]**
One dimensional compressible fluid flow – flow through variable area passage – nozzles and diffusers – fundamentals of supersonics – normal and oblique shock waves and calculation of flow and fluid properties over solid bodies (like flat plate, wedge, diamond) using gas tables	

Course outcomes:

On completion of the course, the student will have the ability to:

CO1	Illustrate the basic equations of flow.	**K3**
CO2	Identify the flow over flat plate, cylinder, oval body and airfoils.	**K3**
CO3	Classify the various losses during flow through pipes.	**K3**
CO4	Illustrate the boundary layer concept in flat plate.	**K3**
CO5	Interpretation of flow and fluid properties of compressed gases.	**K3**

COs and POs Mapping:

COs	**POs**		
	1	**2**	**3**
CO1	3	-	3
CO2	3	-	3
CO3	2	-	3
CO4	3	-	2
CO5	2	-	3

Level 3- Highly Mapped, Level 2- Moderately Mapped, Level 1- Low Mapped, Level 0- Not Mapped

Scheme of Evaluation:

Component	Type of assessment	Max Marks	Reduced Marks	Total	Final marks
Continuous Internal Examination (CIE)	CIE – I	100	50	100	40
	CIE – II	100			
	MCQ	20	10		
	Skill Assessment - I	40	40		
	Skill Assessment - II	40			
End Semester Examination (ESE)	Theory Exam	100	60	60	60
				Total	100

Assessment Pattern

Bloom's Category	Continuous Assessment Tests		Terminal Examination
	1	2	
Remember	20	20	20
Understand	20	60	40
Apply	60	20	40
Analyze	0	0	0
Evaluate	0	0	0
Create	0	0	0

End semester Examination: (QP PATTERN)

- Each unit consists of two 2 marks questions and one 16 marks question (either or).
- All the fifteen questions have to be answered.

5. Compressible Fluid Flow: https://onlinecourses.nptel.ac.in/noc22_me102/preview

Suggested Skill Activities:

1. Surface pressure distribution on a two-dimensional symmetric airfoil at different angles of incidence at low speeds.
2. Smoke flow visualization studies on a two dimensional multi-element airfoil with flaps and slats at different angles of incidence at low speeds.
3. Energy losses in pipe fittings

Course Code:	24RM101	Course Title:	Research Methodology And IPR
Credits:	2	L – T – P	2-0-0

Course objectives:

To impart knowledge on the

- To study various research process and design
- To prepare and explore various data collection methods and sources
- To study about various research data analyzing techniques and reporting formats
- To study the various practices involved in Intellectual Property Rights
- To study about the registration of Patent

Teaching-Learning Process:

Suggested strategies that teachers may use to effectively achieve the course outcomes:

1. Chalk and Talk
2. NPTEL and Other Videos
3. Smart Class Room
4. Flipped Class
5. Technical Seminar
6. Poster Presentation

UNIT I – Research Design	[6 hours]
Overview of research process and design, Use of Secondary and exploratory data to answer the research question, Qualitative research, Observation studies, Experiments and Surveys.	
UNIT II – Data Collection and Sources	**[6 hours]**
Measurements, Measurement Scales, Questionnaires and Instruments, Sampling and methods. Data - Preparing, Exploring, examining and displaying	
UNIT III – Data Analysis and Reporting	**[6 hours]**
Overview of Multivariate analysis, Hypotheses testing and Measures of Association. Presenting Insights and findings using written reports and oral presentation.	

UNIT IV – Intellectual Property Rights	[6 hours]
Intellectual Property – The concept of IPR, Evolution and development of concept of IPR, IPR development process, Trade secrets, utility Models, IPR & Bio diversity, Role of WIPO and WTO in IPR establishments, Right of Property, Common rules of IPR practices, Types and Features of IPR Agreement, Trademark, Functions of UNESCO in IPR maintenance.	

UNIT V – Patents	[6 hours]
Patents – objectives and benefits of patent, Concept, features of patent, Inventive step, Specification, Types of patent application, process E-filling, Examination of patent, Grant of patent, Revocation, Equitable Assignments, Licences, Licensing of related patents, patent agents, Registration of patent agents	

Course outcomes:

On completion of the course, the student will have the ability to:

CO1	Formulate research problem	**K6**
CO2	Analyze literature review and find research gaps to finalize research objectives	**K4**
CO3	Identify the need of ethics in research	**K3**
CO4	Identify the need of IPR of research projects for economic growth and social benefits	**K3**
CO5	Apply their research work for patent through IPR	**K3**

COs and POs Mapping:

COs	POs		
	1	**2**	**3**
CO1	**2**	**-**	**-**
CO2	**2**	**1**	**-**
CO3	**2**	**2**	**-**
CO4	**3**	1	**-**
CO5	**3**	**2**	**-**

Level 3- Highly Mapped, Level 2- Moderately Mapped, Level 1- Low Mapped, Level 0- Not Mapped

Scheme of Evaluation:

Component	Type of assessment	Max Marks	Reduced Marks	Total	Final marks
Continuous Internal Examination (CIE)	CIE – I	100	60	100	40
	CIE – II	100			
	Skill Assessment - I	40	40		
	Skill Assessment - II	40			
End Semester Examination (ESE)	Theory Exam	100	60	60	60
				Total	100

Assessment Pattern

Bloom's Category	Continuous Assessment Tests		Terminal Examination
	1	**2**	
Remember	10	10	10

Web Links and Video Lectures (E-Resources):

1. https://onlinecourses.nptel.ac.in/noc23_ge36/preview

Suggested Skill Activities:

1. Developing a Research Plan
2. Data Collection Analysis for a defined problem
3. Poster preparation
4. Thesis Report Writing
5. Case studies using patent database

Course Code:	24TE131	Course Title:	Thermal Engineering Laboratory
Credits:	2	L – T – P	0-0-4

Course objectives:

To impart knowledge on the

- To conduct experiments on various Thermal Engineering devices to study the performance and its applications.

Teaching-Learning Process:

Suggested strategies that teachers may use to effectively achieve the course outcomes:

1. Experimental Learning

List of Experiments	[60 hours]

1. Performance and emission characteristics of multi cylinder Spark Ignition and Compression Ignition engines using alternate fuels.
2. Thermal performance of variable compression ratio engines.
3. Thermal analysis of natural / forced draught cooling towers.
4. Thermal analysis of heat pumps systems.
5. Experimental studies on vapour compression refrigeration systems using natural refrigerants
6. Overall performance of solar water heating system.
7. Physical, Chemical and thermal Properties of any liquid and gas fuels.
8. Experimental analysis of a Boiler.
9. Calibration of Temperature sensors (RTD / any thermocouple)
10. Calibration of Pressure sensors
11. Experimental studies on axial / centrifugal fan characteristics

List of Equipment	Quantity
Single cylinder / multi cylinder Automotive Engine with data acquisition system	1
Flue gas analyzer	1
Smoke meter	1
Single cylinder variable Compression ratio petrol engine	1
Single cylinder variable Compression ratio Diesel engine	1
Cooling tower test rig	1
Refrigeration cum Heat Pump test rig	1
100 LPD Solar flat plate water heater test rig	1
Pyranometer	1
Redwood / Saybolt viscometer	1
Bomb calorimeter apparatus	1
Gas calorimeter	1
Cloud & Pour point apparatus	1
IBR / Non-IBR Boiler test rig	1
Fan test rig	1
Pressure Calibrator	1
Temperature Calibrator	1

Course outcomes:

On completion of the course, the student will have the ability to:

CO1	Know the various alternate fuels are available for IC engines	K1
CO2	Demonstrate with the thermodynamic relations for thermal engineering devices.	K2
CO3	Apply the working principle of different renewable energy sources for energy applications.	K3
CO4	Select the properties of different fuels	K3
CO5	Experiment with refrigeration and air conditioning system	K3

COs and POs Mapping:

COs	POs		
	1	**2**	**3**
CO1	3	-	2
CO2	3	-	2
CO3	2	-	2
CO4	2	-	3
CO5	2	-	3

Create	0	0	0

Course Code:	24TE201	Course Title:	Instrumentation for Thermal Engineering
Credits:	3	L – T – P	3-0-0

Course objectives:

- To impart knowledge on the
- To classify various measuring instruments.
- To categories temperature sensors and their applications in measurement.
- To outline the advancements in pressure and volume measurements.
- To explore the various measurement techniques for thermos physical properties.
- To compare the different data acquisition systems.

Teaching-Learning Process:

Suggested strategies that teachers may use to effectively achieve the course outcomes:

1. Chalk and Talk
2. Lab experiment videos
3. Blended Mode of Learning
4. Project based Learning
5. Experiential Learning
6. NPTEL and Other Videos
7. Smart Class Room
8. Flipped Class

UNIT I – Measurement Characteristics	[9 hours]

Instrument Classification, Characteristics of Instruments – Static and dynamic, experimental error analysis, Systematic and random errors, Statistical analysis, Uncertainty, Experimental planning and selection of measuring instruments, Reliability of instruments

UNIT II – Temperature Measurement	[9 hours]

Temperature, Types, materials, Accuracy - Selection of Temperature sensors - Effect of length of sensor on temperature measurements- calibration of thermocouple, RTD's & Thermistors- Standards for temperature measurement - Cryogenic & High Temperature measurement techniques.

UNIT III – Pressure Flow & Volume Measurements	[9 hours]

Pressure Sensors: Types & materials - piezoelectric transducers- calibration of pressure sensors-selection of pipes & fittings for pressure sensors. Volume sensors: Standard

volumetric flask- Types, Density measurement instruments for liquids & gases. Flow Sensors: Caroli's mass flow measurements - flow measurements for water, gases, other oils & other chemicals.	
UNIT IV – Measurement of Thermo Physical Properties	**[9 hours]**
Thermal Conductivity measurement of solids - liquids & gases- Sensors & calibration methods- Thermal conductivity of microbar nano composites - Specific heat of liquids, solids through DSC Analysis - viscosity measurement of Newtonian & non-Newtonian fluids through rheological analysis	
UNIT V – Data Acquisition System	**[9 hours]**
Data acquisition systems, Evolution of SCADA, Communication technologies, Monitoring and supervisory functions, SCADA applications in Utility Automation, Industries - SCADA System Components: Schemes- Remote Terminal Unit (RTU), Intelligent Electronic Devices (IED), Communication Network, SCADA Server, SCADA/HMI Systems Various SCADA architectures.	

Course outcomes:

On completion of the course, the student will have the ability to:

CO1	Infer the role of uncertainty analysis in measuring instruments.	K2
CO2	Select the appropriate temperature sensors based on specific applications.	K3
CO3	Identify the suitable sensors for pressure and volume measurements.	K3
CO4	Interpret the thermos physical properties of media.	K2
CO5	Utilize the data acquisition systems in Thermal Systems.	K3

COs and POs Mapping:

COs	POs		
	1	**2**	**3**
CO1	1	1	-
CO2	2	-	2
CO3	2	-	2
CO4	2	-	2
CO5	2	-	1

5. Data Acquisition System: https://onlinecourses.nptel.ac.in/noc23_ee105/preview

Suggested Skill Activities:

1. Monitoring the sensors in electronic injection system in an engine.
2. Monitoring the sensors in electronic ignition system in an engine.
3. Monitoring the sensors in engine lubrication system.
4. Monitoring the sensors in engine cooling system.

Course Code:	24TE202	Course Title:	Internal Combustion Engine Design
Credits:	3	L – T – P	3-0-0

Course objectives:

- To provide the basic grounding on the piston engine design philosophy

Teaching-Learning Process:

Suggested strategies that teachers may use to effectively achieve the course outcomes:

1. Chalk and Talk
2. Lab experiment videos
3. Blended Mode of Learning
4. Project based Learning
5. Experiential Learning
6. NPTEL and Other Videos
7. Smart Class Room
8. Flipped Class

UNIT I – Generalia	[5 hours]
Principle of similitude, Choice of material, Stress, Fatigue and Noise, Vibration and Harshness considerations (NVH)	
UNIT II – Design of Major Components	**[12 hours]**
Piston system, Power cylinder system, Connecting rod assembly, Crankshaft system, Valve Gearing, Stress analyses.	
UNIT III – Design of Other Components / Subsystems	**[12 hours]**
Inlet and exhaust manifolds, cylinder block, cylinder-head, crankcase. Design aspects of engine mountings, gaskets, bearings. Basics of ignition, lubrication and cooling system design. Introduction to design of catalytic converters, particulate traps and EGR systems.	
UNIT IV – Design Specifics of Two-Stroke Engine Systems	**[10 hours]**
Thermal Conductivity measurement of solids - liquids & gases- Sensors & calibration methods- Thermal conductivity of microbar nano composites - Specific heat of liquids, solids through DSC Analysis - viscosity measurement of Newtonian & non-Newtonian fluids through rheological analysis	
UNIT V – Concepts of Computer Aided Design	**[6 hours]**
Preparation of working drawings of designed components using CAD system.	

Course outcomes:

On completion of the course, the student will have the ability to:

CO1	Illustrate the principle of similitude, Choice of material, Stress, Fatigue and Noise, Vibration and Harshness considerations.	K2
CO2	Summarize major components like Piston system, Power cylinder system, Connecting rod assembly, Crankshaft system, Valve Gearing, Stress analyses.	K2
CO3	Develop the subsystems of engine components for ignition, lubrication and cooling system.	K3
CO4	Demonstrate the specific parts of two-stroke engine system.	K2
CO5	Apply the concept of CAD in IC engine components.	K3

COs and POs Mapping:

COs	**POs**		
	1	**2**	**3**
CO1	1	1	-
CO2	2	-	2
CO3	2	-	2
CO4	2	-	2
CO5	2	-	1

Level 3- Highly Mapped, Level 2- Moderately Mapped, Level 1- Low Mapped, Level 0- Not Mapped

Scheme of Evaluation:

   https://onlinecourses.nptel.ac.in/noc22_me65/preview

Suggested Skill Activities:

1. Design major components like Piston system, Power cylinder system.
2. Design major components like Connecting rod assembly, Crankshaft system, Valve Gearing, Stress analyses.
3. Design subsystems of engine components.
4. Design of ignition, lubrication and cooling system.

Course Code:	24TE203	Course Title:	Fuels, Combustion And Emission Control
Credits:	4	L – T – P	4-0-0

Course objectives:

- To understand the types of fuels.
- To compare the fuels in specific point.
- To understand the principles of combustion and combustion equipment's.
- To understand the thermodynamic process behind the combustion.
- To identify the level of emission standards.

Teaching-Learning Process:

Suggested strategies that teachers may use to effectively achieve the course outcomes:

1. Chalk and Talk
2. Lab experiment videos
3. Blended Mode of Learning
4. Project based Learning
5. Experiential Learning
6. NPTEL and Other Videos
7. Smart Class Room
8. Flipped Class

UNIT I – Solid Fuels	[9 hours]

Solid Fuel Types - Coal Family - Properties - Calorific Value - ROM, DMMF, DAF and Bone Dry Basis - Ranking - Bulk & Apparent Density - Storage - Washability - Coking & Caking Coals – Renewable Solid Fuels - Biomass - Wood Waste - Agro Fuels - Manufactured Solid Fuels.

UNIT II – Liquid and Gaseous Fuels	[9 hours]

Liquid Fuel Types - Sources - Petroleum Fractions - Classification - Refining - Properties of Liquid Fuels - Calorific Value, Specific Gravity, Flash & Fire Point, Octane Number, Cetane Number etc., - Alcohols - Tar Sand Oil - Liquefaction of Solid Fuels. Gaseous Fuel Classification - Composition & Properties - Estimation of Calorific Value - Gas Calorimeter. Rich & Lean Gas - Wobbe Index - Natural Gas - Dry & Wet Natural Gas - Stripped NG -

Foul & Sweet NG - LPG - LNG - CNG - Methane - Producer Gas - Gasifiers - Water Gas - Town Gas - Coal Gasification - Gasification Efficiency - Non - Thermal Route - Biogas - Digesters - Reactions - Viability - Economics.
UNIT III – Combustion: Stoichiometry & Kinetics **[9 hours]**
Stoichiometry – Mass Basis & Volume Basis – Excess Air Calculation – Fuel & Flue Gas Compositions - Calculations – Rapid Methods – Combustion Processes – Stationary Flame – Surface or Flameless Combustion – Submerged Combustion – Pulsating & Slow Combustion Explosive Combustion. Mechanism of Combustion – Ignition & Ignition Energy – Spontaneous Combustion – Flame Propagation – Solid, Liquid & Gaseous Fuels Combustion – Flame Temperature – Theoretical, Adiabatic & Actual – Ignition Limits – Limits of Inflammability. Thermo Chemistry - Equilibrium combustion products. Low temperature combustion products – High temperature combustion products.
UNIT IV – Combustion Equipments **[9 hours]**
Coal Burning Equipments – Types – Pulverized Coal Firing – Fluidized Bed Firing – Fixed Bed & Recycled Bed – Cyclone Firing – Spreader Stokers – Vibrating Grate Stokers – Sprinkler Stokers, Traveling Grate Stokers. Oil Burners – Vaporizing Burners, Atomizing Burners – Design of Burners. Gas Burners – Atmospheric Gas Burners – Air Aspiration Gas Burners – Burners Classification according to Flame Structures – Factors Affecting Burners & Combustion.
UNIT V – Emission Control Methods **[9 hours]**
Emissions - Emission index - Corrected concentrations - Control of emissions for premixed and non-prefixed combustion. Flue gas Desulphurization, Coal Beneficiation, Coal Blending, Efficiency Improvement Methods (CO2 reduction) – Super critical boilers, Integrated Gasification Combined Cycle Power Plant, Carbon Capture & Storage (CCS)

Course outcomes:

On completion of the course, the student will have the ability to:

CO1	Identify to enable the fuels used for different purposes.	K3
CO2	Select the fuels at different conditions.	K3
CO3	Summarize the fuels and its combustion levels.	K2
CO4	Select the correct Equipment's on combustion techniques.	K2
CO5	Illustrate the emission control at a standard rate.	K2

COs and POs Mapping:

COs	POs		
	1	**2**	**3**
CO1	3	-	2
CO2	3	-	2
CO3	3	-	2
CO4	-	-	2
CO5	3	-	2

Level 3- Highly Mapped, Level 2- Moderately Mapped, Level 1- Low Mapped, Level 0- Not Mapped

Scheme of Evaluation:

6. Sharma SP., Mohan Chander, Fuels & Combustion, Tata Mcgraw Hill, 1984.
7. Yunus A. Cengel and Michael A. Boles, Thermodynamics, McGraw-Hill Inc., 2006.

Web Links and Video Lectures (E-Resources):

1. Solid Fuels: https://onlinecourses.nptel.ac.in/noc24_ae09/preview
2. Liquid and Gaseous Fuels: https://archive.nptel.ac.in/courses/103/105/103105110/
3. Combustion: Stoichiometry & Kinetics: https://onlinecourses.nptel.ac.in/noc23_me27/preview
4. Combustion Equipments: https://onlinecourses.nptel.ac.in/noc23_me27/preview
5. Emission Control Methods: https://onlinecourses.nptel.ac.in/noc23_ce14/preview

Suggested Skill Activities:

1. Analyze various emission control equipments for solid fuels.
2. Analyze various emission control equipments for fossil fuels.
3. Analyze various emission control methods on automobiles.

Course Code:	24TE231	Course Title:	Thermal Systems Simulation Laboratory
Credits:	2	L – T – P	0-0-4

Course objectives:

To impart knowledge on the

- To learn the modeling and simulation analysis of various thermal engineering application using analysis software.
- To educate the students about calibration and its essentiality in thermal systems.

Teaching-Learning Process:

Suggested strategies that teachers may use to effectively achieve the course outcomes:

1. Experimental Learning

DYNAMIC LINKING OF MAT LAB AND REF PROP SOFTWARE SIMPLE CFD PROBLEMS FOR PRACTICE

NOTE: The above exercises are only guidelines to maintain the standard for teaching and conduct of examination.

List of Experiments	[60 hours]
1. Heat exchanger analysis – NTU method 2. Heat exchanger analysis – LMTD method 3. Convection heat transfer analysis – Velocity boundary layer. 4. Convection heat transfer analysis – Internal flow 5. Radiation heat transfer analysis – Emissivity 6. Critical radius of insulation 7. Lumped heat transfer analysis 8. Conduction heat transfer analysis 9. Condensation heat transfer analysis	

List of Equipment
Software - Modeling software like ProE, Gambit, Ansys, etc Analysis software like Ansys, fluent, CFX, etc.
Equation solving software like Matlab, Engg equation solver.
Every students in a batch must be provided with a terminal.
Hardwares are compatible with the requirement of the above software.

Course outcomes:

On completion of the course, the student will have the ability to:

CO1	Explain the basic concepts of ANSYS Software	K2
CO2	Develop the thermal behavior of heat exchangers using ANSYS Software	K3
CO3	Summarize the thermal deformation for conduction and convection heat transfer applications	K2
CO4	Develop the thermal deformation for conduction and condensation heat transfer applications	K3
CO5	Summarize the thermal deformation for lumped heat transfer applications	K2

PROFESSIONAL ELECTIVES SEMESTER I, (ELECTIVE I & II)

S. No.	Course Code	Course Title	Course Category	L	T	P	C
PROFESSIONAL ELECTIVE COURSES							
1.	24TE111	Aircraft and Jet Propulsion	PEC	3	0	0	3
2.	24TE112	Hydrogen and Fuel Cell Technologies	PEC	3	0	0	3
3.	24TE113	Energy Resources	PEC	3	0	0	3
4.	24TE114	Advanced Internal Combustion Engines	PEC	3	0	0	3
5.	24TE115	Cryogenic Engineering	PEC	3	0	0	3
6.	24TE116	Refrigeration Systems	PEC	3	0	0	3
7.	24TE117	Electronic Engine Management Systems	PEC	3	0	0	3
8.	24TE118	Cogeneration and Waste Heat Recovery Systems	PEC	3	0	0	3

Course Code:	24TE111	Course Title:	Aircraft and Jet Propulsion
Credits:	3	L – T – P	3-0-0

Course objectives:

To impart knowledge on the

- To gain insight on the working principle of rocket engines, different feed systems, propellants and their properties and dynamics of rockets

Teaching-Learning Process:

Suggested strategies that teachers may use to effectively achieve the course outcomes:

1. Chalk and Talk
2. Lab experiment videos
3. Blended Mode of Learning
4. Project based Learning
5. Experiential Learning
6. NPTEL and Other Videos
7. Smart Class Room
8. Flipped Class

UNIT I – GAS DYNAMICS	[8hours]
Wave motion - Compressible fluid flow through variable area devices – Stagnation state Mach Number and its influence and properties, Isentropic Flow, Rayleigh and Fanno Flow. Deflagration and Detonation – Normal shock and oblique shock waves	
UNIT II – THERMODYNAMICS OF AIRCRAFT ENGINES	**[9 hours]**
Theory of Aircraft propulsion – Thrust – Various efficiencies – Different propulsion systems – Turboprop – Ram Jet – Turbojet, Turbojet with after burner, Turbo fan and Turbo shaft. Variable thrust- nozzles – vector control.	
UNIT III – PERFORMANCE CHARACTERISTICS OF AIRCRAFT ENGINES	**[9 hours]**
Engine - Aircraft matching – Design of inlets and nozzles – Performance characteristics of Ramjet, Turbojet, Scramjet and Turbofan engines.	

UNIT IV – ROCKET PROPULSION	[9 hours]
Theory of rocket propulsion – Rocket equations – Escape and Orbital velocity – Multi-staging of Rockets – Space missions – Performance characteristics – Losses and efficiencies.	
UNIT V – ROCKET THRUST CHAMBER	**[10hours]**
Combustion in solid and liquid propellant classification – rockets of propellants and Propellant Injection systems – Non-equilibrium expansion and supersonic combustion – Propellant feed systems – Reaction Control Systems - Rocket heat transfer.	

Course outcomes:

On completion of the course, the student will have the ability to:

CO1	Explain the basics of Compressible fluid flow	K2
CO2	Interpret the working principle of aircraft system	K2
CO3	Solve the performance characteristics of air craft engines like Ramjet, Turbojet, Scramjet and Turbofan engines	K3
CO4	Interpret the working principle of rocket propulsion systems	K2
CO5	Explain the various propellant and combustion system used in rockets	K2

COs and POs Mapping:

COs	**POs**		
	1	**2**	**3**
CO1	**2**	**-**	2
CO2	**2**	**-**	2
CO3	**2**	**-**	2
CO4	**2**	**-**	2
CO5	**2**	**-**	2

Level 3- Highly Mapped, Level 2- Moderately Mapped, Level 1- Low Mapped,
Level 0- Not Mapped

Scheme of Evaluation:

Component	Type of assessment	Max Marks	Reduced Marks	Total	Final marks
Continuous Internal Examination (CIE)	CIE – I	100	50	100	40
	CIE – II	100			
	MCQ	20	10

End semester Examination: (QP PATTERN)

- Each unit consists of two 2 marks questions and one 16 marks question (either or).
- All the fifteen questions have to be answered.

Text Books:

1. Bonney E.A., Zucrow N.J,. Principles of Guided Missile Design, Van Nostranc Co.,

1956.

2. Khajuria P.R. and Dubey S.P., Gas Turbines and Propulsive Systems, Dhanpat Rai Publications, 2003.
3. Mattingly J.D., Elements of Gas turbine Propulsion, McGraw Hill, 1st Edition, 1997.

Reference Books:

1. Philip G. Hill and Carl R. Peterson, Mechanics and Thermodynamics of Propulsion, Second Edition, Addition – Wesley Publishing Company, New York, 2009.
2. S.M.Yahya, Fundamentals of Compressible Flow, Third edition, New Age International Pvt. Ltd, 2003.
3. Zucrow N.J., Principles of Jet Propulsion and Gas Turbines, John Wiley and Sons, New York, 1970.
4. Zucrow N.J., Aircraft and Missile Propulsion, Vol. I and Vol. II, John Wiley and Sons Inc, New York, 1975.

Web Links and Video Lectures (E-Resources):

1. Compressible fluid flow through variable area devices:https://archive.nptel.ac.in/courses/101/108/101108086/
2. Aircraft propulsion: https://onlinecourses.nptel.ac.in/noc21_me95/preview
3. Aircraft Performance : https://archive.nptel.ac.in/courses/101/104/101104061/
4. Rocket propulsion: https://archive.nptel.ac.in/courses/101/106/101106082/
5. Fundamentals of supersonic and hyper sonic flow: https://onlinecourses.nptel.ac.in/noc24_ae12/preview

Suggested Skill Activities:

1. What type of gas flow occurs when the flow velocity is less than the speed of sound and disturbances propagate upstream?
2. What is the purpose of the dual ignition system on an aircraft?

Course Code:	24TE112	Course Title:	HYDROGEN AND FUEL CELL TECHNOLOGIES
Credits:	3	L – T – P	3-0-0

Course objectives:

To impart knowledge on the

- To study in detail on the hydrogen production methodologies, possible applications and various storage options.
- To understand the working principle of a typical fuel cell, its types and to elaborate on its thermodynamics and kinetics.
- To study the cost effectiveness and eco-friendliness of Fuel Cells.

Teaching-Learning Process:

Suggested strategies that teachers may use to effectively achieve the course outcomes:

1. Chalk and Talk
2. Lab experiment videos
3. Blended Mode of Learning
4. Project based Learning
5. Experiential Learning
6. NPTEL and Other Videos
7. Smart Class Room
8. Flipped Class

UNIT I – HYDROGEN – BASICS AND PRODUCTION TECHNIQUES	[9hours]
Hydrogen – physical and chemical properties, salient characteristics. Production of hydrogen – steam reforming – water electrolysis – gasification and woody biomass conversion – biological hydrogen production – photo dissociation – direct thermal or catalytic splitting of water.	
UNIT II – HYDROGEN STORAGE AND APPLICATIONS	**[9 hours]**
Hydrogen storage options – compressed gas – liquid hydrogen – Hydride – chemical Storage – comparisons. Safety and management of hydrogen. Applications of Hydrogen	
UNIT III FUEL CELLS	**[9 hours]**
History – principle - working - thermodynamics and kinetics of fuel cell process – performance evaluation of fuel cell – comparison on battery Vs fuel cell.	
UNIT IV – FUEL CELL – TYPES	**[9 hours]**

Types of fuel cells – AFC, PAFC, SOFC, MCFC, DMFC, PEMFC – relative merits and demerits.

UNIT V–APPLICATION OF FUEL CELL AND ECONOMICS	[9hours]
Fuel cell usage for domestic power systems, large scale power generation, Automobile, Space. Economic and environmental analysis on usage of Hydrogen and Fuel cell. Future trends in fuel cells.	

Course outcomes:

On completion of the course, the student will have the ability to:

CO1	Classify the basics of fuel cells	K2
CO2	Explain the working principles of Hydrogen storage technologies	K2
CO3	Infer the working principles of fuel cells	K2
CO4	Interpret the merits and demerits of various types of fuel cells	K2
CO5	Illustrate the application of fuel cells and its economics	K2

COs and POs Mapping:

COs	**POs**		
	1	**2**	**3**
CO1	**2**	**1**	-
CO2	**2**	**1**	-
CO3	**2**	**1**	-

3. Jeremy Rifkin, The Hydrogen Economy, Penguin Group, USA 2002.
4. Barclay F.J., Fuel Cells, Engines and Hydrogen, Wiley, 2009.

Web Links and Video Lectures (E-Resources):

1. Introduction about hydrogen energy :

   https://archive.nptel.ac.in/courses/103/101/103101215/

2. Hydrogen Energy: Production, Storage

   :https://onlinecourses.nptel.ac.in/noc22_ch66/

3. Introduction about fuel cell https://www.youtube.com/watch?v=L2VSOccUrSk
4. Fuel cell technology https://archive.nptel.ac.in/courses/103/102/103102015/
5. Fuel cell application https://www.youtube.com/watch?v=62363H_I_Qk

Suggested Skill Activities:

1. What are two common ways to produce hydrogen today?
2. How do fuel cells generate electricity from hydrogen?
3. How do you boost the amount of electricity a fuel cell system produces?
4. When hydrogen is used in a fuel cell to create electricity, what is emitted?

Course Code:	24TE113	Course Title:	ENERGY RESOURCES
Credits:	3	L – T – P	3-0-0

Course objectives:

To impart knowledge on the

- To explain concept of various forms of Non-renewable and renewable energy.
- To outline division aspects and utilization of renewable energy sources for both domestics and industrial applications.
- To study the environmental and cost economics of using renewable energy sources compared to fossil fuels.

Teaching-Learning Process:

Suggested strategies that teachers may use to effectively achieve the course outcomes:

1. Chalk and Talk
2. Lab experiment videos
3. Blended Mode of Learning
4. Project based Learning
5. Experiential Learning
6. NPTEL and Other Videos
7. Smart Class Room
8. Flipped Class

UNIT I – COMMERCIAL ENERGY	[9hours]

Coal, Oil, Natural gas, Nuclear power and Hydro - their utilization pattern in the past, present and future projections of consumption pattern - Sector-wise energy consumption – environmental impact of fossil fuels – Energy scenario in India – Growth of energy sector and its planning in India

UNIT II – SOLAR ENERGY	[9 hours]

Solar radiation at the earth's surface – solar radiation measurements – estimation of average solar radiation - solar thermal flat plate collectors - concentrating collectors – solar thermal applications - heating, cooling, desalination, drying, cooking, etc – solar thermal electric power plant - principle of photovoltaic conversion of solar energy, types of solar cells – Photovoltaic applications: battery charger, domestic lighting, street lighting, water pumping etc - solar PV power plant – Net metering concept.

UNIT III – WIND ENERGY	[9 hours]
Nature of the wind – power in the wind – factors influencing wind – wind data and energy estimation - wind speed monitoring - wind resource assessment - Betz limit - site selection – wind energy conversion devices - classification, characteristics, applications – offshore wind energy - Hybrid systems - safety and environmental aspects – wind energy potential and installation in India - Repowering concept	
UNIT IV – BIO-ENERGY	**[9 hours]**
Biomass resources and their classification - Biomass conversion processes - Thermo chemical conversion - direct combustion – biomass gasification - pyrolysis and liquefaction – biochemical conversion - anaerobic digestion - types of biogas Plant - applications - alcohol production from biomass – bio diesel production – Urban waste to energy conversion - Biomass energy programme in India.	
UNIT V – OTHER TYPES OF ENERGY	**[9hours]**
Ocean energy resources - principle of ocean thermal energy conversion (OTEC) - ocean thermal power plant - ocean wave energy conversion - tidal energy conversion – small hydro - geothermal energy - geothermal power plant – hydrogen production and storage - Fuel cell – principle of working - various types - construction and applications	

Course outcomes:

On completion of the course, the student will have the ability to:

CO1	Outline the commercial energy and renewable energy sources.	K2
CO2	Explain the working principle of Solar energy systems	K2
CO3	Explain the working principle of Wind energy systems	K2
CO4	Explain the working principle of Bio energy systems	K2
CO5	Explain the working principle of other energy systems	K2

COs and POs Mapping:

COs	POs		
	1	**2**	**3**

4. Bio energy https://onlinecourses.nptel.ac.in/noc19_bt16/preview
5. Ocean and other thermal energy https://www.youtube.com/watch?v=DD0Y6Snxpdk

Suggested Skill Activities:

1. What happens during the process nuclear fission?
2. Why is nuclear energy nonrenewable?
3. What can solar cells be used in?
4. What are the Advantages of Fossil Fuels

Course Code:	24TE114	Course Title:	ADVANCED INTERNAL COMBUSTION ENGINES
Credits:	3	L – T – P	3-0-0

Course objectives:

To impart knowledge on the

- To gain insight on the working principle of spark ignition engines and compression ignition engines.
- To study the pollutant formation and its control in IC engines.
- To study the recent technologies adopted in IC engine applications

Teaching-Learning Process:

Suggested strategies that teachers may use to effectively achieve the course outcomes:

1. Chalk and Talk
2. Lab experiment videos
3. Blended Mode of Learning
4. Project based Learning
5. Experiential Learning
6. NPTEL and Other Videos
7. Smart Class Room
8. Flipped Class

UNIT I – SPARK IGNITION ENGINES	[9hours]

Spark ignition Engine mixture requirements – Fuel – Injection systems – Mono point, Multipoint injection, Direct injection – Stages of combustion – Normal and abnormal combustion – factors affecting knock – Combustion chambers.

UNIT II – COMPRESSION IGNITION ENGINES	[9 hours]

States of combustion in C.I. Engine – Direct and indirect injection systems – Combustion chambers – Fuel spray behavior – spray structure, spray penetration and evaporation – air motion – Introduction to Turbo charging.

UNIT III – POLLUTANT FORMATION AND CONTROL	[9 hours]

Pollutant – Sources – Formation of carbon monoxide, Unburnt hydrocarbon, NOx, Smoke and Particulate matter – Methods of controlling Emissions – Catalytic converters and Particulate Traps – Methods of measurements and Introduction to emission norms and Driving cycles

UNIT IV – ALTERNATIVE FUELS	[9 hours]
Alcohol, Hydrogen, Natural Gas and Liquefied Petroleum Gas- Properties, Suitability, Merits and Demerits as fuels, Engine Modifications.	
UNIT V – RECENT TRENDS	**[9hours]**
Lean Burn Engines – Stratified charge Engines – homogeneous charge compression ignition engines – Plasma Ignition – Measurement techniques – laser Doppler, Anemometry. Use of nano technology in IC Engines.	

Course outcomes:

On completion of the course, the student will have the ability to:

CO1	Summarize the various methods of combustion and injection systems on a spark ignition engine	K2
CO2	Demonstrate the various methods of combustion, spray behavior and injection systems on a Compressed Ignition engine	K2
CO3	Contrast the emission and control in SI & CI Engines	K2
CO4	Illustrate the properties merits and demerits of various alternative fuels	K2
CO5	Explain the recent trends of advanced combustion and measurement techniques.	K2

4. Combustion engine https://archive.nptel.ac.in/courses/112/103/112103262/

Suggested Skill Activities:

1. What is the stoichiometric ratio of the Air + Gasoline mixture?
2. What is the compression ratio of a typical spark-ignition (SI) engine?
3. What is Compression ratio/Expansion ratio/Clearance ratio?
4. How does knocking occur in a Petrol/Diesel engine
5. How does a Turbocharger / Supercharger work?

Course Code:	24TE115	Course Title:	CRYOGENIC ENGINEERING
Credits:	3	L – T – P	3-0-0

Course objectives:

To impart knowledge on the

- To give introductory knowledge of cryogenic Engineering.
- To impart knowledge in liquefaction, separation of cryogenics gases and working of cryocoolers.
- To embark on a research career in Cryogenic Engineering.

Teaching-Learning Process:

Suggested strategies that teachers may use to effectively achieve the course outcomes:

1. Chalk and Talk
2. Lab experiment videos
3. Blended Mode of Learning
4. Project based Learning
5. Experiential Learning
6. NPTEL and Other Videos
7. Smart Class Room
8. Flipped Class

UNIT I – INTRODUCTION	[9hours]
Insight on Cryogenics, Properties of Cryogenic fluids, Material properties at Cryogenic Temperatures. Applications of Cryogenics in Space Programs, Superconductivity, Cryo Metallurgy, Medical applications.	
UNIT II – LIQUEFACTION CYCLES	**[9 hours]**
Carnot Liquefaction Cycle, F.O.M. and Yield of Liquefaction Cycles. Inversion Curve – Joule Thomson Effect. Linde Hampson Cycle, Precooled Linde Hampson Cycle, Claudes Cycle Dual Cycle, Ortho-Para hydrogen conversion, Eollins cycle, Simpson cycle, Critical Components in Liquefaction Systems.	
UNIT III – SEPARATION OF CRYOGENEIC GASES	**[9 hours]**
Binary Mixtures, T-C and H-C Diagrams, Principle of Rectification, Rectification Column Analysis- McCabe Thiele Method. Adsorption Systems for purification.	

UNIT IV – CRYOGENIC REFRIGERATORS	[9 hours]
J. T. Cryocoolers, Stirling Cycle Refrigerators, G.M.Cryocoolers, Pulse Tube Refrigerators Regenerators used in Cryogenic Refrigerators, Dilution refrigerators, Magnetic Refrigerators.	
UNIT V – HANDLING OF CRYOGENS	**[9hours]**
Cryogenic Dewar, Cryogenic Transfer Lines. Insulations used in Cryogenic Systems, Instrumentation to measure Flow, Level and Temperature	

Course outcomes:

On completion of the course, the student will have the ability to:

CO1	Explain the Concepts of Cryogenics	K2
CO2	Solve the various cycles during liquefaction.	K3
CO3	Explain the various methods adopted in the separation of cryogenic gases.	K2
CO4	Explain the working principle of cryogenic refrigerator.	K2
CO5	Explain the concepts in handling of cryogens.	K2

3. LIQUEFACTION CYCLES https://youtu.be/UOi9JXlicXA
4. Safety of crogenic https://nptel.ac.in/courses/112101004

Suggested Skill Activities:

1. What is the meaning of negative exergy destruction in a cryogenic system?
2. What is cryogenic machining used for?
3. How does cryogenic machining work?
4. What are the benefits of cryogenic machining?
5. What types of tools are used in cryogenic machining
6. What safety precautions are needed for cryogenic machining?

Course Code:	24TE116	Course Title:	REFRIGERATION SYSTEMS
Credits:	3	L – T – P	3-0-0

Course objectives:

To impart knowledge on the

- To study the cycle analysis pertaining to Refrigeration systems.
- To study the performance of system components and their balancing in cycles.
- To study the significance of Refrigerants and their impact on the environment

Teaching-Learning Process:

Suggested strategies that teachers may use to effectively achieve the course outcomes:

1. Chalk and Talk
2. Lab experiment videos
3. Blended Mode of Learning
4. Project based Learning
5. Experiential Learning
6. NPTEL and Other Videos
7. Smart Class Room
8. Flipped Class

UNIT I – INTRODUCTION AND REFRIG ERANTS	[9hours]

Applications, Unit of refrigeration – Ideal cycles - Classification of Refrigerants, Refrigerant properties, Oil Compatibility, Environmental Impact-Montreal / Kyoto protocols-Eco Friendly Refrigerants, alternatives to HCFCS, Secondary Refrigerants.

UNIT II – REFRIGERATION CYCLES – ANALYSIS	[9 hours]

Development of Vapor Compression Refrigeration Cycle from Reverse Carnot Cycle-conditions for high COP-deviations from ideal vapor compression cycle, Multipressure System, Cascade Systems-Analysis. Vapor Absorption Systems-Aqua Ammonia & Li-Br Systems, Steam Jet Refrigeration Thermo Electric Refrigeration, Air Refrigeration cycles, Heat pumps.

UNIT III – REFRIGERATION SYSTEM COMPONENTS	[9 hours]

Compressor- Types, performance, Characteristics, Types of Evaporators & Condensers and their functional aspects, Expansion Devices and their Behaviour with fluctuating load, cycling controls, other components such as Accumulators, Receivers, Oil Separators, Strainers, Driers,

Check Valves, Solenoid Valves Defrost Controllers, etc.	
UNIT IV – SYSTEM BALANCING	**[9 hours]**
Balance points and system simulation - compressor, condenser, evaporator and expansion devices performance – Complete system performance; graphical and mathematical analysis – sensitivity analysis.	
UNIT V – ELECTRICAL DRIVES & CONTROLS	**[9hours]**
Electric circuits in Refrigeration systems, Refrigerant control devices, Types of Motors, Starters, Relays, Thermostats, Microprocessor based control systems, Pressure controls and other controls, Acoustics and noise controls.	

Course outcomes:

On completion of the course, the student will have the ability to:

CO1	Summarize the various refrigerants used in Refrigeration system	K2
CO2	Make use of the various cycles of Refrigeration	K3
CO3	Explain the working Principle of components of refrigerated system	K2
CO4	Utilize the performance of refrigeration devices	K3
CO5	Explain the working principle of drives and control devices used in refrigerated systems	K2

COs and POs Mapping:

COs	**POs**		
	1	**2**	**3**
CO1	**2**	**2**	**-**
CO2	**2**	**2**	**-**
CO3	**2**	**2**	**-**
CO4	**2**	**2**	**-**
CO5	**2**	**2**	**-**

Level 3- Highly Mapped, Level 2- Moderately Mapped, Level 1- Low Mapped, Level 0- Not Mapped

Scheme of Evaluation:

Component	Type of assessment	Max Marks	Reduced Marks	Total	Final marks
Continuous Internal Examination (CIE)	CIE – I	100	50	100	40
	CIE – II	100			
	MCQ	20	10		
	Skill Assessment - I	40	40		
	Skill Assessment - II	40			
End Semester Examination (ESE)	Theory Exam	100	60	60	60
				Total	100

Assessment Pattern

3. Rex Milter, Mark R.Miller., Air conditioning and Refrigeration, McGraw Hill, 2006.

Stoecker W.F., Refrigeration and Air conditioning, McGraw-Hill BookCompany,1989

Web Links and Video Lectures (E-Resources):

1. **Introduction about refrigeration**
   https://www.youtube.com/watch?v=nlsNmhiID74
2. **Application of refrigeration system**
   https://archive.nptel.ac.in/courses/112/105/112105129/
3. **Refrigeration cycle https://www.youtube.com/watch?v=kC-VswG3W8s**
4. **Fundamental of electrical drives**
   https://www.youtube.com/watch?v=1AT1yuQ9awM&list=PLFW6lRTa1g83sIfVY1p1xGqPGYUmXyahx

Suggested Skill Activities:

1. What does a vapour absorption refrigerator use in the form of a refrigerant?
2. one ton of refrigeration in the S.J. unit is:
3. At a domestic refrigerator's back, the bank of tubes is known as:
4. Which refrigerants is highly flammable and toxic?

Course Code:	24TE117	Course Title:	ELECTRONIC ENGINE MANAGEMENT SYSTEMS
Credits:	3	L – T – P	3-0-0

Course objectives:

To impart knowledge on the

- To provide basic grounding on electronics
- To learn the various sensors used in engine management systems
- Give an overview of different types of ignition systems
- To understand the significance of gasoline injection systems
- To know the latest advancements in Diesel injection systems

Teaching-Learning Process:

Suggested strategies that teachers may use to effectively achieve the course outcomes:

1. Chalk and Talk
2. Lab experiment videos
3. Blended Mode of Learning
4. Project based Learning
5. Experiential Learning
6. NPTEL and Other Videos
7. Smart Class Room
8. Flipped Class

UNIT I – FUNDAMENTALS OF AUTOMOTIVE ELECTRONICS	[9hours]

Components for Electronic Engine Management System- Open and Closed Loop Control Strategies- PID Control- Look Up Tables- Introduction to Modern Control Strategies Like Fuzzy Logic and Adaptive Control. Switches- Active Resistors- Transistors- Current Mirrors/Amplifiers- Voltage and Current References- Comparator- Multiplier. Amplifier- Filters- A/D and D/A Converters.

UNIT II – SENSORS AND ACTUATORS	[9 hours]

Inductive- Hall Effect- Thermistor- Piezo Electric- Piezoresistive- Based Sensors. Throttle Position- Mass Air Flow- Crank Shaft Position- Cam Position- Engine Speed Sensor- Exhaust Oxygen Level (Two Step- Linear Lambda and Wideband)- Knock- Manifold Temperature and Pressure Sensors. Solenoid- Relay (Four and Five Pin)- Stepper Motor

UNIT III – SI ENGINE MANAGEMENT	[9 hours]
Layout and Working of SI Engine Management Systems. Group and Sequential Injection Techniques. MPFI- GDI- Advantages of Electronic Ignition Systems. Types of Solid State Ignition Systems and Their Principle of Operation- Contactless (BREAKERLESS) Electronic Ignition System- Electronic Spark Timing Control	
UNIT IV – CI ENGINE MANAGEMENT	**[9 hours]**
Fuel Injection System Parameters Affecting Combustion- Noise and Emissions in CI Engines. Electronically Controlled Unit Injection System. Common Rail Fuel Injection System. Working of Components Like Fuel Injector- Fuel Pump- Rail Pressure Limiter- Flow Limiter- EGR Valve.	
UNIT V – DIGITAL ENGINE CONTROL SYSTEM	**[9hours]**
Cold Start and Warm Up Phases- Idle Speed Control- Acceleration and Full Load Enrichment- Deceleration Fuel Cut-off. Fuel Control Maps- Open Loop and Closed Loop Control – Integrated Engine Control System- Electromagnetic Compatibility – EMI Suppression Techniques – Electronic Dash Board Instruments – Onboard Diagnosis System.	

Course outcomes:

On completion of the course, the student will have the ability to:

CO1	Explain the basic electronic components and controls used in Sensors	K2
CO2	Explain the different types of sensors used in an automobile engine	K2
CO3	Explain the ignition and injection methods used in an SI engine	K2
CO4	Illustrate the fuel injection systems in a diesel engine and the emission control systems	K2
CO5	Explain the electronic systems used in the fuel control system and the dash board unit.	K2

COs and POs Mapping:

COs	POs		
	1	**2**	**3**
CO1	**2**		2
CO2	**2**		2
CO3	**1**	**1**	
CO4	**2**		1
CO5	**2**		

Level 3- Highly Mapped, Level 2- Moderately Mapped, Level 1- Low Mapped, Level 0- Not Mapped

Scheme of Evaluation:

Component	**Type of assessment**	**Max Marks**	**Reduced Marks**	**Total**	**Final marks**
Continuous Internal Examination (CIE)	CIE – I	100	50	100	40
	CIE – II	100			
	MCQ	20	10		
	Skill Assessment - I	40	40		
	Skill Assessment - II	40

3. fuel system http://acl.digimat.in/nptel/courses/video/112106299/L26.html
4. **senor and actuars https://onlinecourses.nptel.ac.in/noc21_ee32/preview**

Suggested Skill Activities:

1. What are the important parameters in a gasoline engine that can be controlled?
2. Hall effect pickup use
3. LVDT is used to measure
4. Thermistors are desirable because of their
5. Seebeck effect is used in?
6. Catalytic converters use lambda sensors to keep?

Course Code:	24TE118	Course Title:	COGENERATION AND WASTE HEAT RECOVERY SYSTEMS
Credits:	3	L – T – P	3-0-0

Course objectives:

To impart knowledge on the

- To analyze the basic energy generation cycles.
- To detail about the concept of cogeneration, its types and probable areas of applications.
- To study the significance of waste heat recovery systems and carry out its economic analysis.

Teaching-Learning Process:

Suggested strategies that teachers may use to effectively achieve the course outcomes:

1. Chalk and Talk
2. Lab experiment videos
3. Blended Mode of Learning
4. Project based Learning
5. Experiential Learning
6. NPTEL and Other Videos
7. Smart Class Room
8. Flipped Class

UNIT I – INTRODUCTION	[9hours]

Introduction – principles of thermodynamics – cycles – topping – bottoming – combined cycle-organic rankine cycles – performance indices of cogeneration systems – waste heat recovery – sources and types – concept of tri and quad generation

UNIT II – COGENERATION TECHNOLOGIES	[9 hours]

Configuration and thermodynamic performance – steam turbine congeneration systems – gas turbine cogeneration systems – reciprocating IC engines cogeneration systems – combined cycles cogeneration systems – advanced cogeneration systems: fuel cell, Stirling engines etc

UNIT III – ISSUES AND APPLICATIONS OF COGENERATION TECHNOLOGIES	[9 hours]

Cogeneration plants electrical interconnection issues – utility and cogeneration plant interconnection issues – applications of cogeneration in utility sector – industrial sector –

building sector – rural sector – impacts of cogeneration plants – fuel, electricity and environment.	
UNIT IV – WASTE HEAT RECOVERY SYSTEMS	**[9 hours]**
Selection criteria for waste heat recovery technologies – recuperators – Regenerators – economizers – plate heat exchangers – thermic fluid heaters – Waste heat boilers – classification, location, service conditions, design Considerations – fluidized bed heat exchangers – heat pipe exchangers – heat pumps – sorption systems.	
UNIT V – ECONOMIC ANALYSIS	**[9hours]**
Investment cost – economic concepts – measures of economic performance – procedure for economic analysis – examples – procedure for optimized system selection and design – load curves – sensitivity analysis – regulatory and financial frame work for cogeneration and waste heat recovery systems.	

Course outcomes:

On completion of the course, the student will have the ability to:

CO1	Explain the basic concepts of waste heat recovery systems.	K2
CO2	Illustrate the technologies in cogeneration systems.	K2
CO3	Explain the issues and applications of cogeneration technologies.	K2
CO4	Explain the working of various waste heat recovery systems.	K2
CO5	Explain the concepts of economic analysis of waste heat recovery systems.	K2

COs and POs Mapping:

COs	**POs**		
	1	**2**	**3**
CO1	**2**	**1**	**-**
CO2	**2**	**1**	**-**

3. Blended Mode of Learning
4. Project based Learning
5. Experiential Learning
6. NPTEL and Other Videos
7. Smart Class Room
8. Flipped Class

UNIT I – INTRODUCTION	[9hours]

Energy transfer between fluid and rotor velocity triangles for a generalised turbo machines – velocity triangle. Euler's equation for turbo machines and its different forms. Degree of reaction in turbo-machines – various efficiencies – isentropic, mechanical, thermal, overall and polytropic – fan laws – Dimensionless parameters – Specific speed – Cordier Diagram

UNIT II – CENTRIFUGAL BLOWERS	[9 hours]

Centrifugal Blowers: Theoretical characteristic curves, velocity triangles, losses and hydraulic efficiency, flow through impeller casing, inlet, nozzle, volute, diffusers. Leakage losses, mechanical losses, multi-vane impellers, cross flow fans. Selection of Centrifugal blower for duct flow.

UNIT III – AXIAL FLOW FANS	[9 hours]

Rotor design using airfoil theory, vortex theory, cascade effects, degree of reaction, blade twist, stage design, surge and stall, stator and casing, mixed flow impellers. Selection of axial fans / blower for duct flow.	
UNIT IV – COMPRESSORS	**[9 hours]**
Reciprocating compressors, Construction Type – open, hermetic and semi sealed, effect of cylinder cooling, heating and friction. Dynamic compressor - centrifugal compressor, velocity triangles, performance characteristics, part load operation, Capacity control. Selection of compressor for different applications.	
UNIT V – DESIGN AND APPLICATIONS	**[9hours]**
Special design and applications of blowers / compressors for air conditioning plants, cooling towers, ventilation systems, booster systems - turbocharger.	

Course outcomes:

On completion of the course, the student will have the ability to:

CO1	Apply the fundamentals of Turbo machinery and solve the problems on Energy Transfer	K3
CO2	Apply the Centrifugal Blowers and Fans for various applications.	K3
CO3	Summarize the different types of axial fan design and performance.	K2
CO4	Interpret the various compressors based on its performance.	K2
CO5	Choose the fans / blowers /compressors for the given applications	K3

COs and POs Mapping:

UNIT I – INTRODUCTION	[9hours]

Electronic Equipment, Components of Electronic Systems, Thermal management in electronic devices - Packaging Trends. Electronic packaging and interconnection technology. Conduction in Electronic Equipment: Thermal Conductivity, Thermal Resistances, Conductivity in Solids, Conductivity in Fluids, Conduction—Steady State, Conduction in Simple Geometries, Conduction through a Plane Wall, Conduction through Cylinders and Spheres.

UNIT II – ELECTRONICS ASSISTED IN THERMAL COMPONENTS	[9 hours]

Conduction—Transient, Lumped Capacitance Method, Conduction in Extended Surfaces. Fin Efficiency, Fin Optimization, Fin Surface Efficiency, Thermal Contact Resistance in Electronic Equipment, Discrete Heat Sources and Thermal Spreading. Fluid Dynamics for Electronic Equipment- Boundary Layer Theory, Turbulent Flow, Loss Coefficients and Dynamic Drag, Fans and Pumps, Electronic Chassis Flow.

UNIT III – IMPACT OF RADIATION ON SURFACE	[9 hours]

Radiation Heat Transfer in Electronic Equipment, The Electromagnetic Spectrum, Radiation Equations, Stefan-Boltzmann Law, Surface Characteristics, Emittance, Emittance Factor, Emittance from Extended Surface, Absorptance, Reflectance, Specular Reflectance, Heat Transfer with Phase Change. Combined Modes of Heat Transfer for Electronic Equipment, Radiation and Convection in Parallel	
UNIT IV – ANALYSIS OF ELECTRONIC EQUIPMENT	**[9 hours]**
Introduction to Thermal Design of Electronic Equipment. Analysis of Thermal Failure of Electronic Components. Analysis of Thermal Stresses and Strain, Effect of PCB Bending Stiffness on Wire Stresses, Vibration Fatigue in Lead Wires and Solder Joints. Electronics Cooling Methods in Industry. Heat Sinks, Heat Pipes, Heat Pipes in Electronics Cooling, Thermoelectric Cooling, Immersion Cooling, Cooling Techniques for High Density Electronics.	
UNIT V – COOLING SYSTEMS FOR ELECTRONIC PACKAGES	**[9hours]**
Cooling systems for electronics packages – heat sinks, heat spreaders, heat pipes, microchannels, actuators, fans, cold plates; Thermo-mechanical issues in electronic packages Effects of Vibration – vibrating systems, vibration of axially loaded components, circuit boards, Theorem of Castigliano; Reliability Metrology and Analysis, Environmental Stress Screening	

Course outcomes:

On completion of the course, the student will have the ability to:

CO1	Identify the basic knowledge about the packaging of electronics	K3
CO2	Utilize the ability of electronic cooling system.	K3
CO3	Relate the radiation through multi electronic devices	K2
CO4	Summarize the performance calculation of Electronics Equipment.	K2
CO5	Applying cooling systems for different thermal sourcing agents	K3

2. Lab experiment videos
3. Blended Mode of Learning
4. Project based Learning
5. Experiential Learning
6. NPTEL and Other Videos
7. Smart Class Room
8. Flipped Class

UNIT I – PSYCHROMETRY AND AIR CONDITIONING PROCESSES	[9hours]
Moist Air properties, use of Psychrometric Chart, Various Psychrometric processes, Air Washer, Adiabatic Saturation. Summer and winter Air conditioning, Enthalpy potential and its insights.	
UNIT II – LOAD ESTIMATION	**[9 hours]**
Thermal comfort – Design conditions – Solar Radiation-Heat Gain through envelopes – Infiltration and ventilation loads – Internal loads – Procedure for heating and cooling load estimation.	
UNIT III – AIR CONDITIONING SYSTEMS	**[9 hours]**
Thermal distribution systems – Single, multi zone systems, terminal reheat systems, Dual duct systems, variable air volume systems, water systems and Unitary type systems.	
UNIT IV – AIR DISTRIBUTION AND CONTROL	**[9 hours]**

Flow through Ducts , Static & Dynamic Losses , Diffusers , Duct Design–Equal Friction Method, System Balancing , Fans & Duct System Characteristics , Fan Arrangement Variable Air Volume systems, Air Handling Units and Fan Coil units – Control of temperature, humidity, air flow and quality.	
UNIT V – HVAC SYSTEM IN AUTOMOBILES	**[9hours]**
Automotive System layout and Components- Commonly used Refrigerants- Safety devices – Climate control – Fuel efficiency aspects.	

Course outcomes:

On completion of the course, the student will have the ability to:

CO1	Demonstrate the psychometrically the Air conditioning processes.	K3
CO2	Experiment with the heat load for summer and winter Air conditioning applications.	K3
CO3	Understand and appreciate the utility of different Air conditioning systems for different applications.	K2
CO4	Develop a fan-duct system for Air conditioning application.	K3
CO5	Understand and appreciate the individual components of an automobile Air conditioning system. Various HVAC system components for various applications in the building requirements.	K2

COs and POs Mapping:

Course Code:	24TE214	Course Title:	ALTERNATE FUELS FOR IC ENGINES
Credits:	3	L – T – P	3-0-0

Course objectives:

To impart knowledge on the

- To analyze the basic energy generation cycles.
- To detail about the concept of cogeneration, its types and probable areas of applications.
- To study the significance of waste heat recovery systems and carry out its economic analysis.

Teaching-Learning Process:

Suggested strategies that teachers may use to effectively achieve the course outcomes:

1. Chalk and Talk
2. Lab experiment videos
3. Blended Mode of Learning
4. Project based Learning
5. Experiential Learning
6. NPTEL and Other Videos
7. Smart Class Room
8. Flipped Class

UNIT I – INTRODUCTION	[9hours]

Availability, Suitability, Properties, Merits and Demerits of Potential Alternative Fuels – Alcohols, Biodiesel, Hydrogen, Liquefied Petroleum Gas, Natural Gas, Biogas, Fuel standards – ASTM & EN.

UNIT II – SPECIAL AND SYNTHETIC FUELS	[9 hours]

Different synthetic fuels, Merits, and demerits, Dual, Bi-fuel and Pilot injected fuel systems, Fuel additives – types and their effect on performance and emission characteristics of engines, Flexi-fuel systems, Ethers - as fuel and fuel additives, properties and characteristics.

UNIT III – ALCOHOL FUELS	[9 hours]

Alcohols – Properties, Production methods and usage in engines. Blending, dual fuel operation, surface ignition, spark ignition and oxygenated additives. Performance, combustion and emission Characteristics in engines. Issues & limitation in alcohols

UNIT IV – BIO-DIESEL FUELS	[9 hours]
Vegetable oils and their important properties. Fuel properties characterization. Methods of using vegetable oils – Blending, preheating, Transesterification and emulsification – Performance, combustion and emission characteristics in diesel engines. Third generation biofuels, Ternary and Quaternary fuels, Issues & limitation of using vegetable oils in IC engines	
UNIT V – GASEOUS FUELS	**[9hours]**
Biogas, Natural gas, LPG, Hydrogen – Properties, problems, storage and safety aspects. Methods of utilisation in engines. Performance, combustion and emission characteristics in engines. Issues & limitation in Gaseous fuels	

Course outcomes:

On completion of the course, the student will have the ability to:

CO1	Identify the potential alternate fuels and their characteristics	**K3**
CO2	Make use of appropriate synthetic fuels and fuel additives for better combustion characteristics	**K3**
CO3	Illustrate the alcohol fuels effectively for lower emissions	**K2**
CO4	Summarize the utilization of Bio-Diesel and its types as a suitable fuel in CI engines	**K2**
CO5	Utilize the different gaseous fuels and predict their performance and combustion characteristics	**K3**

COs and POs Mapping:

COs	**POs**		
	1	**2**	**3**

Course Code:	24TE215	Course Title:	DESIGN OF HEAT EXCHANGERS
Credits:	3	L – T – P	3-0-0

Course objectives:

To impart knowledge on the

- To analyze the basic energy generation cycles.
- To detail about the concept of cogeneration, its types and probable areas of applications.
- To study the significance of waste heat recovery systems and carry out its economic analysis.

Teaching-Learning Process:

Suggested strategies that teachers may use to effectively achieve the course outcomes:

1. Chalk and Talk
2. Lab experiment videos
3. Blended Mode of Learning
4. Project based Learning
5. Experiential Learning
6. NPTEL and Other Videos
7. Smart Class Room
8. Flipped Class

UNIT I – FUNDAMENTALS OF HEAT EXCHANGER	[9hours]
Temperature distribution and its implications types–shell and tube heat exchangers– regenerators and recuperators – analysis of heat exchangers–LMTD and effectiveness method.	
UNIT II – STRESS ANALYSIS	**[9 hours]**
Effect of turbulence – friction factor – pressure loss – stress in tubes – header sheets and pressure vessels – thermal stresses, shear stresses –types of failures.	
UNIT III – DESIGN ASPECTS	**[9 hours]**
Heat transfer and pressure loss – flow configuration – effect of baffles – effect of deviations from ideality – design of double pipe – finned tube – shell and tube heat exchangers – simulation of heat exchangers.	
UNIT IV – COMPACT AND PLATE HEAT EXCHANGERS	**[9 hours]**
Types–merits and demerits–design of compact heat exchangers, plate heat exchangers– performance influencing parameters– limitations.	

UNIT V – CONDENSERS AND COOLING TOWERS	[9hours]
Design of surface and evaporative condensers–cooling tower –performance characteristics	

Course outcomes:

On completion of the course, the student will have the ability to:

CO1	Identify the heat exchangers and illustrate the applications of various types of heat exchangers	K3
CO2	Interpret the significance of stress analysis of heat exchangers	K2
CO3	Apply the design of tubular heat exchangers for various applications	K3
CO4	Apply the design of compact heat exchangers for industrial requirements	K3
CO5	Solve the performance calculation of condensers and cooling towers	K3

UNIT I – INTRODUCTION	[9hours]
Introduction to Battery Management System, Cells & Batteries, Nominal voltage and capacity, C rate, Energy and power, Cells connected in series, Cells connected in parallel, Electrochemical and lithiumion cells, Rechargeable cell, Charging and Discharging Process, Overcharge and Undercharge, Modes of Charging.	
UNIT II – BATTERY MANAGEMENT SYSTEM REQUIREMENT	**[9 hours]**
Introduction and BMS functionality, Battery pack topology, BMS Functionality, Voltage Sensing, Temperature Sensing, Current Sensing, BMS Functionality, High-voltage contactor control, Isolation sensing, Thermal control, Protection, Communication Interface, Range estimation, State-of- charge estimation, Cell total energy and cell total power.	
UNIT III – BATTERY STATE OF CHARGE AND STATE OF HEALTH ESTIMATION, CELL BALANCING	**[9 hours]**

Battery state of charge estimation (SOC), voltage-based methods to estimate SOC, Model-based state estimation, Battery Health Estimation, Lithium-ion aging: Negative electrode, Lithium-ion aging: Positive electrode, Cell Balancing, Causes of imbalance, Circuits for balancing.	
UNIT IV – MODELLING AND SIMULATION	**[9 hours]**
Equivalent-circuit models (ECMs), Physics-based models (PBMs), Empirical modelling approach, Physics-based modelling approach, simulating an electric vehicle, Vehicle range calculations, simulating constant power and voltage, Simulating battery packs,	
UNIT V – DESIGN OF BATTERY BMS	**[9hours]**
Design principles of battery BMS, Effect of distance, load, and force on battery life and BMS, energy balancing with multi-battery system.	

Course outcomes:

On completion of the course, the student will have the ability to:

CO1	Interpret the role of battery management system	K2
CO2	Explain the requirements of Battery Management System	K2
CO3	Interpret the concept associated with battery charging / discharging process	K2
CO4	Identify the various parameters of battery and battery pack	K3
CO5	Make use of the model of battery pack	K3

6. NPTEL and Other Videos
7. Smart Class Room
8. Flipped Class

UNIT I – INTRODUCTION	[9hours]
Necessity of energy storage–types of energy storage–comparison of energy storage technologies– Applications.	
UNIT II – THERMAL STORAGE SYSTEM	**[9 hours]**
Thermal storage–Types–Modelling of thermal storage units–Simple water and rock bed storage system–pressurized water storage system–Modelling of phase change storage system –Simple units, packed bed storage units – Modelling using porous medium approach, Use of TRNSYS.	
UNIT III – ELECTRICAL ENERGY STORAGE	**[9 hours]**
Fundamental concept of batteries–measuring of battery performance, charging and discharging of a battery, storage density, energy density, and safety issues. Types of batteries – Lead Acid, Nickel–Cadmium, Zinc Manganese di oxide and modern batteries for example(i)zinc-Air(ii)Nickel Hydride,(iii)Lithium Battery.	

UNIT IV – HYDROGEN AND BIOGAS STORAGE	[9 hours]
Hydrogen storage options–compressed gas–liquid hydrogen–Metal Hydrides, chemical Storage, Biogas storage-comparisons. Safety and management of hydrogen and Biogas storage-Applications.	
UNIT V – ALTERNATE ENERGY STORAGE TECHNOLOGIES	**[9hours]**
Flywheel, Super capacitors, Principles & Methods–Applications, Compressed air Energy storage, Concept of Hybrid Storage – Applications.	

Course outcomes:

On completion of the course, the student will have the ability to:

CO1	Identify the energy storage technologies for suitable applications.	K3
CO2	Interpret the energy storage systems using TRNSYS.	K2
CO3	Summarize the concepts and types of batteries.	K2
CO4	Examine the principle of operation of Hydrogen and Biogas storage systems.	K3
CO5	Explain the working of super capacitor, Flywheel and compressed energy storage systems	K2

UNIT I – INTRODUCTION	[9hours]
Basics of vehicle performance, vehicle power source characterization, transmission characteristics, History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies.	
UNIT II – HYBRID ELECTRIC DRIVE TRAINS	**[9 hours]**
Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis. Electric Drive-trains: Basic concept of electric traction, introduction to various electric drive-train topologies, power flow control in electric drive-train topologies, fuel efficiency analysis.	
UNIT III – CONTROL OF AC & DC DRIVES	**[9 hours]**
Introduction to electric components used in hybrid and electric vehicles, Configuration and control - DC Motor drives, Induction Motor drives, Permanent Magnet Motor drive, and Switch Reluctance Motor drives, drive system efficiency.	

UNIT IV – ENERGY STORAGE	[9 hours]
Introduction to Energy Storage Requirements in Hybrid and Electric Vehicles, Energy storage and its analysis - Battery based, Fuel Cell based, and Super Capacitor based, Hybridization of different energy storage devices.	
UNIT V – DRIVE SIZING AND ENERGY MANAGEMENT STRATEGIES	**[9hours]**
Sizing the drive system: Matching the electric machine and the internal combustion engine (ICE), Sizing the propulsion motor, sizing the power electronics, selection of appropriate energy storage technology, Energy Management Strategies: Introduction to energy management strategies used in hybrid and electric vehicles, classification and comparison of energy management strategies, implementation issues.	

Course outcomes:

On completion of the course, the student will have the ability to:

CO1	Interpret the Characterize and configure hybrid drivetrains requirement for a vehicle	K2
CO2	Summarize the appropriate hybrid and electric drive trains in a vehicle	K2
CO3	Classify the suitable AC and DC drives for electric vehicles.	K2
CO4	Relate the suitable energy storage system for a hybrid / electric vehicle	K2
CO5	Illustrate the energy management strategies to ensure better economy and efficiency	K2

Energy scenario: India Vs. World – Load curves and–thermodynamic analysis of Conventional Power Plants (Coal, Gas Turbine and Diesel)-Advanced Power Cycles-Kalina Cycle, IGCC.	
UNIT II – COAL BASED THERMAL POWER PLANTS	**[9 hours]**
Basics of typical power plant utilities – Boilers, Nozzles, Turbines, Condensers, Cooling Towers, Water Treatment and Piping system – steam rate and heat rate – mean temperature of heat addition-Rankine cycle improvements–Superheat, Reheat, Regeneration, Supercritical, AFBC/PFBC – computation of per unit cost of power generation from coal/biomass	
UNIT III – GAS TURBINE AND DIESEL POWER PLANTS	**[9 hours]**
Brayton cycle – Open and Closed – Improvements – Intercooler, Reheating and Regeneration. Diesel power plant – Layout – Performance analysis and improvement – Techniques for starting, cooling and lubrication of diesel engines-computation of per unit cost of power generation .	

UNIT IV – CHP AND MHD POWER PLANTS	[9 hours]
Cogeneration systems–types-heat to power ratio-Thermodynamic performance of steam turbine gas turbine and IC engine-based cogeneration systems–Poly Generation-Binary Cycle-Combined cycle. MHD –Open cycle and closed cycle-Hybrid MHD & steam power plants	
UNIT V – HYDRO ELECTRIC & NUCLEAR POWER PLANTS	**[9hours]**
Hydroelectric Power plants – classifications – essential elements – pumped storage systems – micro and mini hydel power plants. General aspects of Nuclear Engineering – Components of nuclear power plants – Nuclear reactors & types – PWR, BWR, CANDU, Gas Cooled, Liquid Metal Cooled and Breeder reactor-nuclear safety–Environmental Issues-Computation of per Unit cost of power generation.	

Course outcomes:

On completion of the course, the student will have the ability to:

CO1	Classify the appropriate power generation technologies for mitigating the energy gap	K2
CO2	Interpret the steam rate, heat rate and cost for generating electricity from coal based thermal power plants	K2
CO3	Choose the measures for improving the performance of gas turbine and diesel power plants	K3
CO4	Explain the applicability and performance of a cogeneration system	K2
CO5	Infer the suitable type of hydroelectric/nuclear power plant commensurate with the prevailing conditions	K2

COs and POs Mapping:

COs	**POs**		
	1	**2**	**3**
CO1	**2**	**1**	**-**
CO2	**2**	**1**	**-**
CO3	**-**	**1**	**-**
CO4	**2**	**-**	**-**
CO5	**2**	**1**	**-**

Level 3- Highly Mapped, Level 2- Moderately Mapped, Level 1- Low Mapped, Level 0- Not Mapped

Scheme of Evaluation:

Component	Type of assessment	Max Marks	Reduced Marks	Total	Final marks
Continuous Internal Examination (CIE)	CIE – I	100	50	100	40
	CIE – II	100			
	MCQ	20	10		
	Skill Assessment - I	40	40		
	Skill Assessment - II	40			
End Semester Examination (ESE)	Theory Exam	100	60	60	60
				Total	100

Assessment Pattern

Bloom's Category	Continuous Assessment Tests		Terminal Examination
	1	2	
Remember	20	20	20
Understand	20	60	40
Apply	60	20	40
Analyze	0	0	0
Evaluate	0	0	0
Create	0	0	0

End semester Examination: (QP PATTERN)

- Each unit consists of two 2 marks questions and one 16 marks question (either or).
- All the fifteen questions have to be answered.

AUDIT COURSES SEMESTER I & II,

S. No.	Course Code	Course Title	Course Category	L	T	P	C
AUDIT COURSES							
1.	24AC201	English for Research Paper Writing	PEC	2	0	0	0
2.	24AC202	Disaster Management	PEC	2	0	0	0
3.	24AC203	Constitution of India	PEC	2	0	0	0

Course Code:	24AC201	Course Title:	ENGLISH FOR RESEARCH PAPER WRITING
Credits:	0	L – T – P	2-0-0

Course objectives:

To impart knowledge on the

- To analyze the basic energy generation cycles.
- To detail about the concept of cogeneration, its types and probable areas of applications.
- To study the significance of waste heat recovery systems and carry out its economic analysis.

Teaching-Learning Process:

Suggested strategies that teachers may use to effectively achieve the course outcomes:

1. Chalk and Talk
2. Lab experiment videos
3. Blended Mode of Learning
4. Project based Learning
5. Experiential Learning
6. NPTEL and Other Videos
7. Smart Class Room
8. Flipped Class

UNIT I – INTRODUCTION TO RESEARCH PAPER WRITING	[6 hours]
Planning and Preparation, Word Order, Breaking up long sentences, Structuring Paragraphs and Sentences, Being Concise and Removing Redundancy, Avoiding Ambiguity and Vagueness.	
UNIT II – PRESENTATION SKILLS	**[6 hours]**
Clarifying Who Did What, Highlighting Your Findings, Hedging and Criticizing, Paraphrasing and Plagiarism, Sections of a Paper, Abstracts, Introduction	
UNIT III – TITLE WRITING SKILLS	**[6 hours]**
Key skills are needed when writing a Title, key skills are needed when writing an Abstract, key skills are needed when writing an Introduction, skills needed when writing a Review of the Literature, Methods, Results, Discussion, Conclusions, The Final Check	
UNIT IV - RESULT WRITING SKILLS	**[6 hours]**

Skills are needed when writing the Methods, skills needed when writing the Results, skills are needed when writing the Discussion, skills are needed when writing the Conclusions.	
UNIT V – VERIFICATION SKILLS	**[6 hours]**
Sizing the drive system: Matching the electric machine and the internal combustion engine (ICE), Sizing the propulsion motor, sizing the power electronics, selection of appropriate energy storage technology, Energy Management Strategies: Introduction to energy management strategies used in hybrid and electric vehicles, classification and comparison of energy management strategies, implementation issues.	

Course outcomes:

On completion of the course, the student will have the ability to:

CO1	Understand that how to improve your writing skills and level of readability	K2
CO2	Infer about what to write in each section	K2
CO3	Understand the skills needed when writing a Title	K2
CO4	Understand the skills needed when writing the Conclusion	K2
CO5	Interpret the good quality of paper at very first-time submission	K2

COs and POs Mapping:

COs	**POs**		
	1	**2**	**3**
CO1	**2**	**1**	**-**
CO2	**2**	**1**	**-**
CO3	**-**	**1**	**-**
CO4	**2**	**-**	**-**
CO5	**2**	**1**	**-**

Level 3- Highly Mapped, Level 2- Moderately Mapped, Level 1- Low Mapped, Level 0- Not Mapped

Scheme of Evaluation:

Component	**Type of assessment**	**Max Marks**	**Reduced Marks**	**Total**	**Final marks**

Create	0	0	0

End semester Examination: (QP PATTERN)

- Each unit consists of two 2 marks questions and one 16 marks question (either or).
- All the fifteen questions have to be answered.

Text Books:

1. Adrian Wallwork , English for Writing Research Papers, Springer New York Dordrecht Heidelberg London, 2011
2. Day R How to Write and Publish a Scientific Paper, Cambridge University Press 2006

Reference Books:

1. Goldbort R Writing for Science, Yale University Press (available on Google Books) 2006
2. Highman N, Handbook of Writing for the Mathematical Sciences, SIAM. Highman's book 1998.

Course Code:	24AC202	Course Title:	DISASTER MANAGEMENT
Credits:	0	L – T – P	2-0-0

Course objectives:

To impart knowledge on the

- To analyze the basic energy generation cycles.
- To detail about the concept of cogeneration, its types and probable areas of applications.
- To study the significance of waste heat recovery systems and carry out its economic analysis.

Teaching-Learning Process:

Suggested strategies that teachers may use to effectively achieve the course outcomes:

1. Chalk and Talk
2. Lab experiment videos
3. Blended Mode of Learning
4. Project based Learning
5. Experiential Learning
6. NPTEL and Other Videos
7. Smart Class Room
8. Flipped Class

UNIT I – INTRODUCTION TO RESEARCH PAPER WRITING	[6 hours]
Disaster: Definition, Factors and Significance; Difference between Hazard And Disaster; Natural and Manmade Disasters: Difference, Nature, Types and Magnitude.	
UNIT II – REPERCUSSIONS OF DISASTERS AND HAZARDS	**[6 hours]**
Economic Damage, Loss of Human and Animal Life, Destruction Of Ecosystem. Natural Disasters: Earthquakes, Volcanisms, Cyclones, Tsunamis, Floods, Droughts And Famines, Landslides And Avalanches, Man-made disaster: Nuclear Reactor Meltdown, Industrial Accidents, Oil Slicks And Spills, Outbreaks Of Disease And Epidemics, War And Conflicts.	
UNIT III – DISASTER PRONE AREAS IN INDIA	**[6 hours]**
Study of Seismic Zones; Areas Prone To Floods and Droughts, Landslides And Avalanches; Areas Prone To Cyclonic and Coastal Hazards with Special Reference To Tsunami; Post-Disaster Diseases and Epidemics	
UNIT IV - DISASTER PREPAREDNESS AND MANAGEMENT	**[6 hours]**

Preparedness: Monitoring Of Phenomena Triggering a Disaster or Hazard; Evaluation of Risk: Application of Remote Sensing, Data from Meteorological And Other Agencies, Media Reports: Governmental and Community Preparedness.	
UNIT V – RISK ASSESSMENT	**[6 hours]**
Disaster Risk: Concept and Elements, Disaster Risk Reduction, Global and National Disaster Risk Situation. Techniques of Risk Assessment, Global Co-Operation in Risk Assessment and Warning, People's Participation in Risk Assessment. Strategies for Survival	

Course outcomes:

On completion of the course, the student will have the ability to:

CO1	Summarize the basics of disaster	K2
CO2	Explain the critical understanding of key concepts in disaster risk reduction and humanitarian response.	K2
CO3	Illustrate the disaster risk reduction and humanitarian response policy and practice from multiple perspectives.	K2
CO4	Describe an understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflict situations.	K2
CO5	Relate the strengths and weaknesses of disaster management approaches	K2

COs and POs Mapping:

8. Flipped Class

UNIT I – HISTORY OF MAKING OF THE INDIAN CONSTITUTION	[3 hours]
History, Drafting Committee, (Composition & Working)	
UNIT II – PHILOSOPHY OF THE INDIAN CONSTITUTION	**[3 hours]**
Preamble, Salient Features	
UNIT III – CONTOURS OF CONSTITUTIONAL RIGHTS AND DUTIES	**[6 hours]**
Fundamental Rights, Right to Equality, Right to Freedom, Right against Exploitation, Right to Freedom of Religion, Cultural and Educational Rights, Right to Constitutional Remedies, Directive Principles of State Policy, Fundamental Duties.	
UNIT IV - ORGANS OF GOVERNANCE	**[6 hours]**
Parliament, Composition, Qualifications and Disqualifications, Powers and Functions, Executive, President, Governor, Council of Ministers, Judiciary, Appointment and Transfer of Judges, Qualifications, Powers and Functions.	

UNIT V – LOCAL ADMINISTRATION	[6 hours]
District's Administration head: Role and Importance, Municipalities: Introduction, Mayor and role of Elected Representative, CEO, Municipal Corporation. Pachayati raj: Introduction, PRI: Zila Pachayat. Elected officials and their roles, CEO Zila Pachayat: Position and role. Block level: Organizational Hierarchy(Different departments), Village level:Role of Elected and Appointed officials, Importance of grass root democracy.	

Course outcomes:

On completion of the course, the student will have the ability to:

CO1	Summarize the growth of the demand for civil rights in India for the bulk of Indians before the arrival of Gandhi in Indian politics	K2
CO2	Explain the intellectual origins of the framework of argument that informed the conceptualization of social reforms leading to revolution in India.	K2
CO3	Illustrate the circumstances surrounding the foundation of the Congress Socialist Party under the leadership of Jawaharlal Nehru	K2
CO4	Interpret the eventual failure of the proposal of direct elections through adult suffrage in the Indian Constitution.	K2
CO5	Contrast the passage of the Hindu Code Bill of 1956.	K2

COs and POs Mapping:
